Trent and Scott,

The updated price for equipment will be \$6,450. Some of the existing equipment will be reused. The USGS will provide labor to move the gage, get necessary DOT permits and survey the gage to NAVD 88 datum as our contribution to the move. We would like to salvage the existing gage house if possible. Please note that precipitation monitoring will probably not be possible at the new location.

Please let me know if you have questions.

Thanks,
Ken

Ken,

Excellent timing since I brought this up to Scott at the Flood Authority Meeting yesterday, and he said to send him a reminder with the cost. Would you happen to have an updated cost of the equipment that would be needed?

Trent

Hello Trent, are there any updates on the status of relocating the gage at the ole Wastewater Treatment Plant?

Thanks, Ken

Ken,

Thanks for the info; I will put the formal request into the Flood Authority, but probably wouldn't plan on any funding until the State's Capital Budget gets approved.

Trent,

The costs for moving the Chehalis at Wastewater Treatment Plant (12025100) gage are as follows;

City of Chehalis to provide \$6,000 to purchase a new radar stage sensor and mount, new wire-weight gage, solar panel and regulator. The existing gage is on A/C power. The new gage will use solar power.

The USGS will move the gage. Provide the shelter and all necessary hardware. Run levels and tie the gage to datum (NAVD 88). Acquire permission from WSDOT for installation of gage on the bridge.

We would like to salvage the shelter on the treatment plant property at some point.

Please let me know if you have questions.

Thanks,

Ken
