**Subject:** RE: Satsop Cultural follow up

### Permitting - Cultural Resources Update:

In June 2021, Dudek excavated 21 shovel probes along the eroding bank on the Willis and Chapman parcels within the proposed API/APE for another project along the Satsop (ASRP Lower Satsop Phase II). No cultural resources were identified. The Right Bank stabilization project extends west from the bank outside of our previously tested and surveyed API/APE. A pedestrian survey and additional subsurface testing will need to be conducted for these areas of the Right Bank project. Although the DAHP predictive model maps the Right Bank stabilization project within an area considered "very high risk for cultural resources," the local landform is flooded regularly five months of the year (November–March), and the landform is not as likely to yield archaeological deposits as the model indicates. The additional survey and subsurface testing fieldwork to sample the Right Bank API/APE is forthcoming, and a cultural resources technical survey report will be submitted for this permitting process.
