## **PROPOSED ORGANIZATION STRUCTURE**

## **Grays Harbor and Willapa Bay** Sedimentation/Erosion Dynamics and **Preferred Mitigation Measures Project (Phase II)**

(5-29-2019)

Broad scope is to: Conduct mapping, modeling, and documentation of sediment and erosion dynamics in Grays Harbor and Willapa Bay and identify preferred mitigation measures.

Proposed approach is to secure contractor support/expertise to address such discrete tasks as:

- Surveying/mapping bay floors
- Modeling bay currents
- Determining sediment sources, contributions
- Developing best practices, mitigation measures
- **Technical review**
