

From Watershed Evaluations to Implementation: Project successes in the eastern region

Mitch Redfern, Stephen Ranson, Amanda Richardson

October 5, 2021

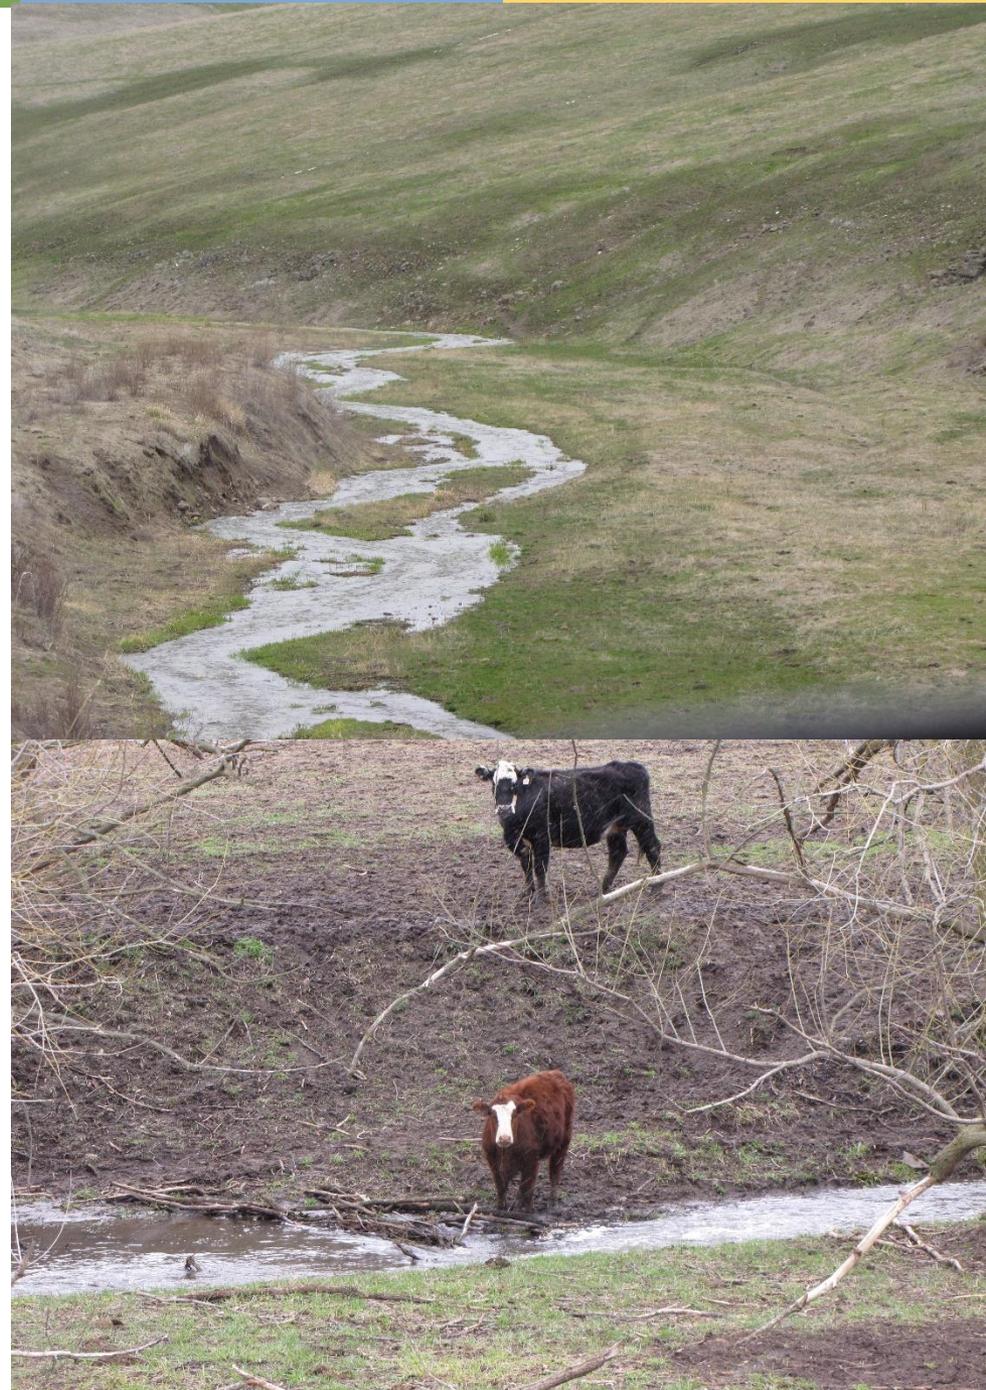

Snake River Watershed Projects

Examples of some successful projects

Deadman Creek Livestock BMPs

- Livestock access to Deadman Creek, riparian area degraded
- Deadman Creek provides habitat for **ESA-listed** Snake River Steelhead and fails state water quality standards
- Partnered with landowner, Pomeroy Conservation District, and local NRCS

Deadman Creek Livestock BMPs

- 2.5 miles of stream protected/restored
 - Fencing
 - Off-stream water
 - Planting

Deadman Creek Livestock BMPs

- Leveraged Ecology funds along with CREP to fully protect water quality
- Each project poses unique challenges and opportunities

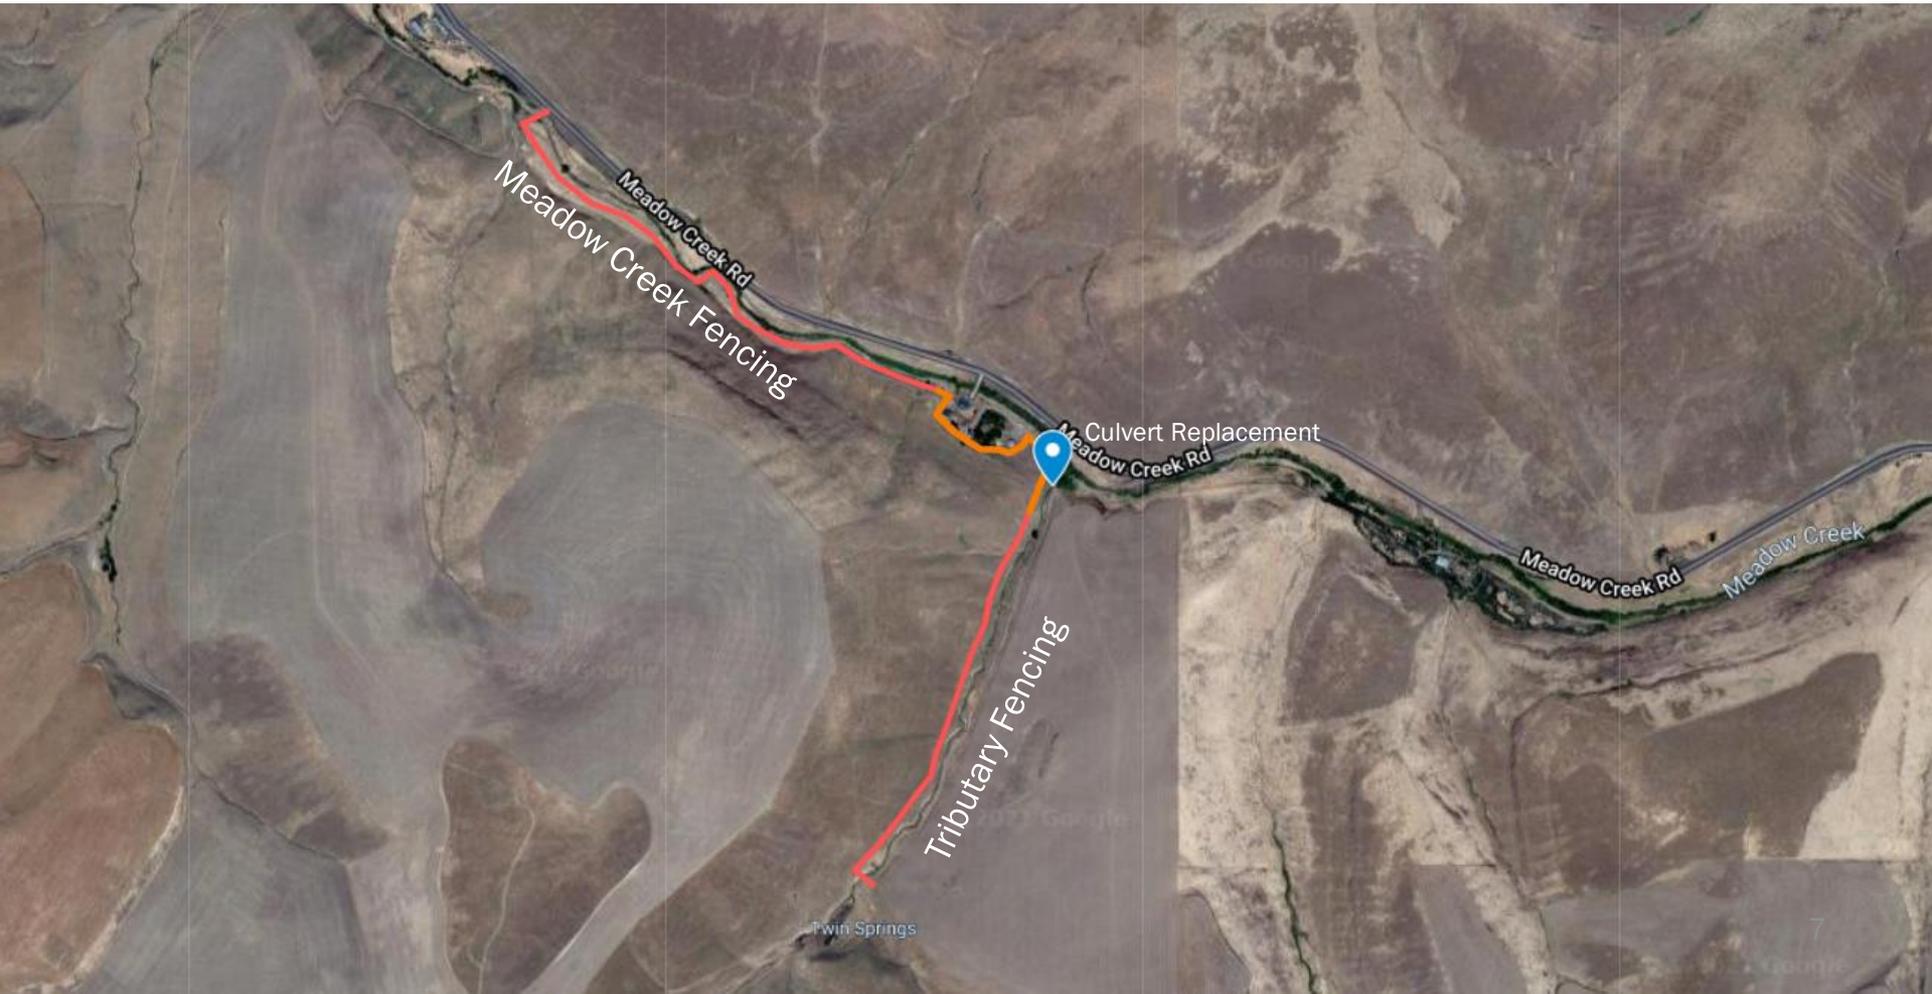

Meadow Creek Livestock BMPs

- Livestock access to Meadow Creek and small spring-fed tributary
- Meadow Creek habitat for **ESA-listed** Snake River Steelhead and fails state water quality standards
- Partnered with landowner and Pomeroy Conservation District

Meadow Creek Livestock BMPs

- Over 1 mile of creek protected/restored
 - Fencing
 - Culvert replacement
 - Corral improvements

Meadow Creek Livestock BMPs

- Continuing to partner with Pomeroy CD on projects throughout the Deadman/Meadow Creek Watersheds

Asotin Creek Livestock BMPs

- Livestock access to Asotin Creek
- Asotin Creek provides habitat for **ESA-listed** Snake River Steelhead, Spring Chinook Salmon, and Bull Trout and fails state water quality standards
- Partnered with landowner, Asotin Conservation District, and local NRCS

Asotin Creek Livestock BMPs

- Over 6 miles of creek protected/restored
 - Fencing
 - Bridge Installation
 - Off-stream water
 - Planting

Asotin Creek Livestock BMPs

- Large project leveraged with CREP provided robust water quality protection

Steptoe Creek Livestock BMPs

- Livestock access to majority of Steptoe Watershed
- Partnered with landowners, Palouse Conservation District, Snake River Salmon Recovery Board, Whitman County, NRCS, and more

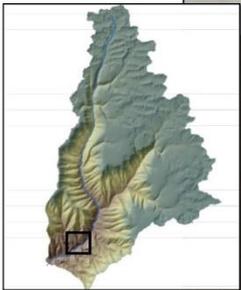

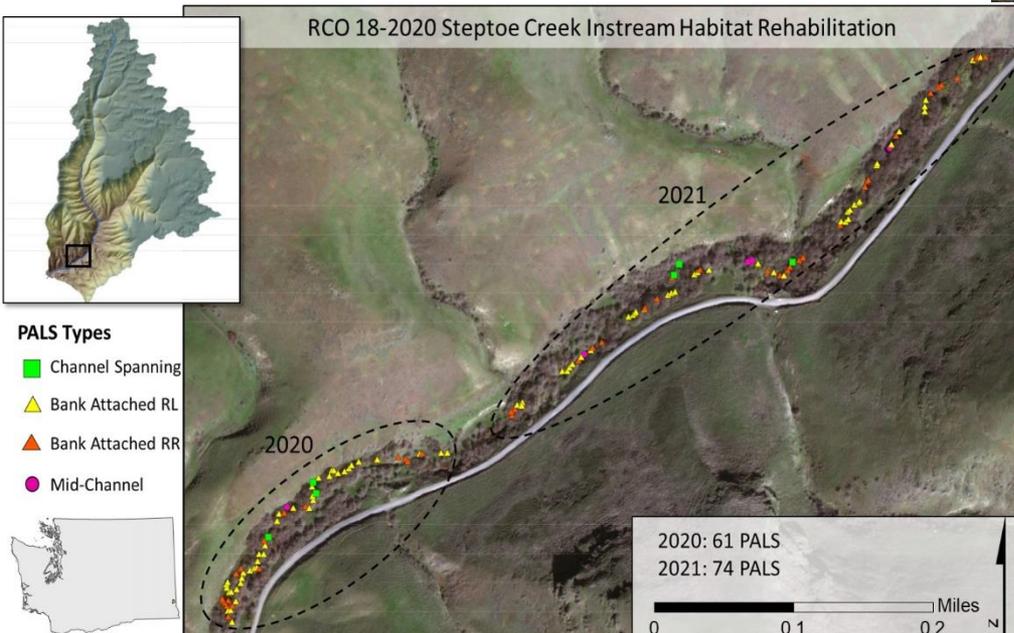

Steptoe Creek Livestock BMPs

- Over 4 miles of creek protected/restored
 - Fencing
 - Off-stream water
 - Plantings
 - Bridge Installation
 - In-stream log structures

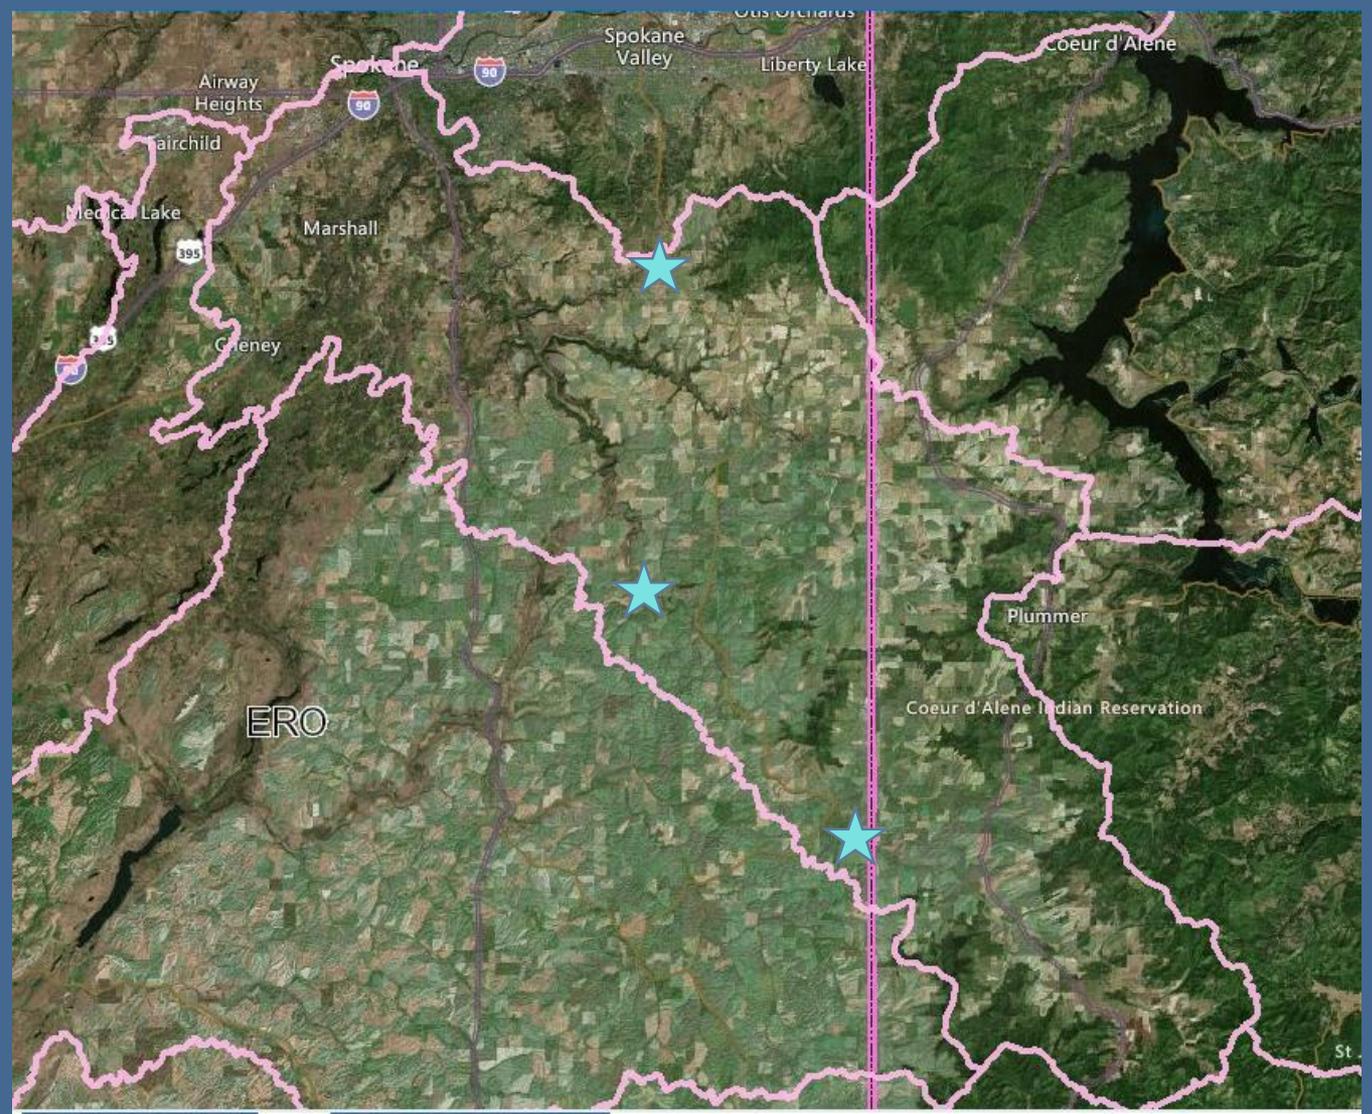

Steptoe Creek Livestock BMPs

- Working with multiple landowners and various partners to ensure watershed scale protection
- Additional livestock BMPs coming in 2022-2023

Hangman Watershed Projects

Examples of some successful projects

California Creek Livestock BMPs

- Livestock pollution to California Creek, riparian area degraded
- California Creek only endemic population of Redband trout, WA Hangman
- Met with landowner several times, found funding and project partner – Spokane Falls Trout Unlimited

California Creek Livestock BMPs

- 2,200' of California Creek protected/restored
 - Fencing
 - Off Stream Watering
 - Riparian Planting

California Creek livestock BMPs

- Coeur d'Alene Tribe assisted with riparian planting
- Ecology working on supplemental grant with Spokane Tribe for riparian enhancement and maintenance

Upper Hangman Riparian Restoration

- Dryland agricultural production along Hangman mainstem
- Degraded riparian corridor
- Met with landowner several times, found funding, project partner – Spokane Tribe

Upper Hangman Riparian Restoration

- 1 acre buffer along 850' section of Hangman Creek planted/landuse setback
- Additional 5.3 acre conifer planting in degraded riparian area

Upper Hangman Riparian Restoration

- Ecology working on supplemental grant with Spokane Tribe for riparian enhancement and maintenance

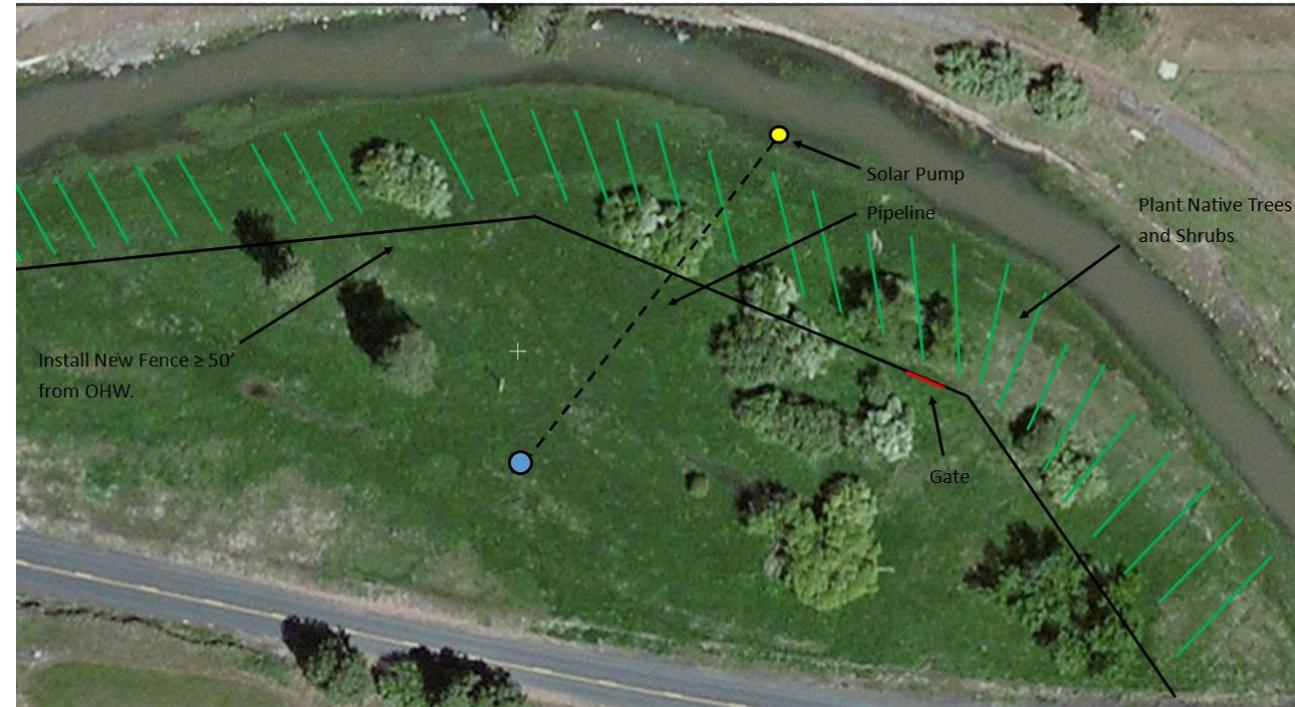

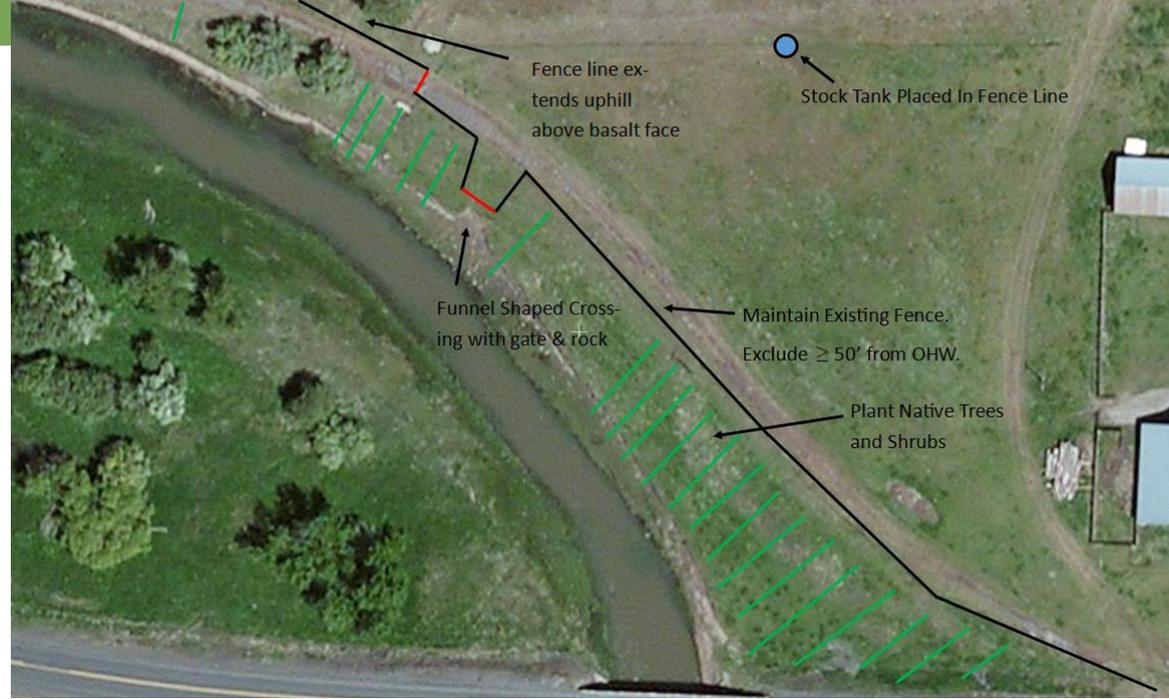

Hangman Mainstem Livestock BMPs

- Livestock pollution to Hangman mainstem, riparian area degraded
- Met with landowner several times, found funding and project partner – Spokane Conservation District and the Lands Council

Hangman Mainstem Livestock BMPs

- Protection/restoration 2,200' reach of Hangman mainstem
 - Fencing
 - Hardened crossing
 - Off-stream watering
 - Riparian planting

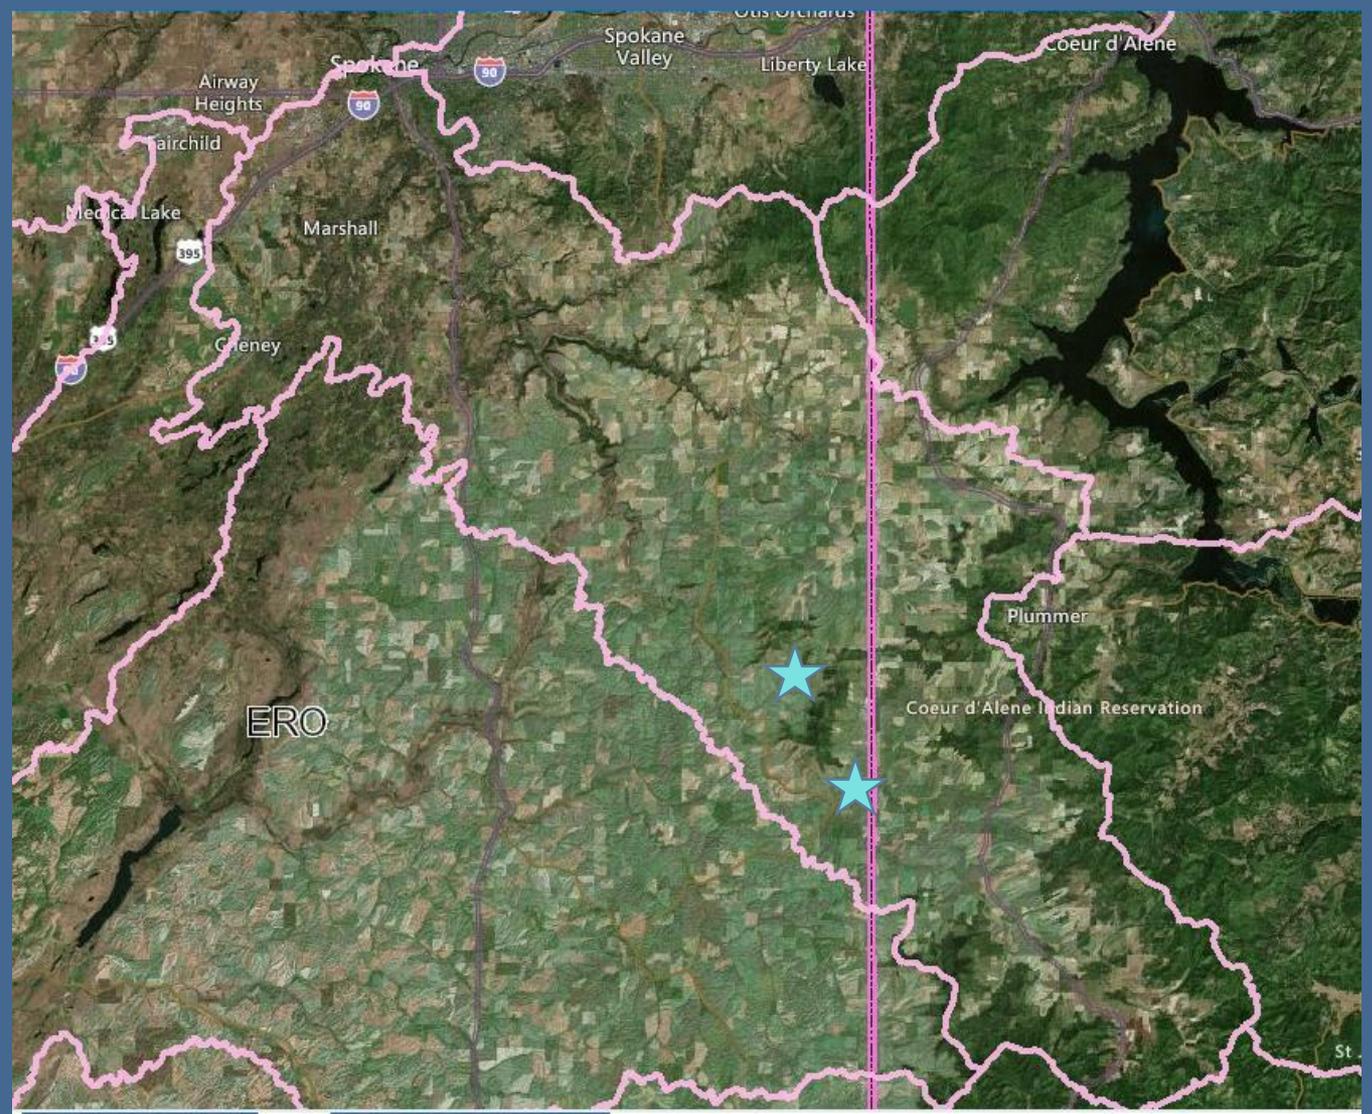

Hangman Mainstem Livestock BMPs

- Looking to work with landowner on additional plantings and planting maintenance

Hangman Watershed Projects

Examples of some future projects

Little Hangman Riparian Restoration - 2022

- Met with Landowner several times, found project partner
- Spokane CD grant awarded 2020

Little Hangman Riparian Restoration 2022

- 4,200' L.
Hangman Creek
restored/protected
 - Streambank
stabilization
 - 10 acre riparian
planting
 - Commodity
buffer program
 - Design 2021,
construction
2022

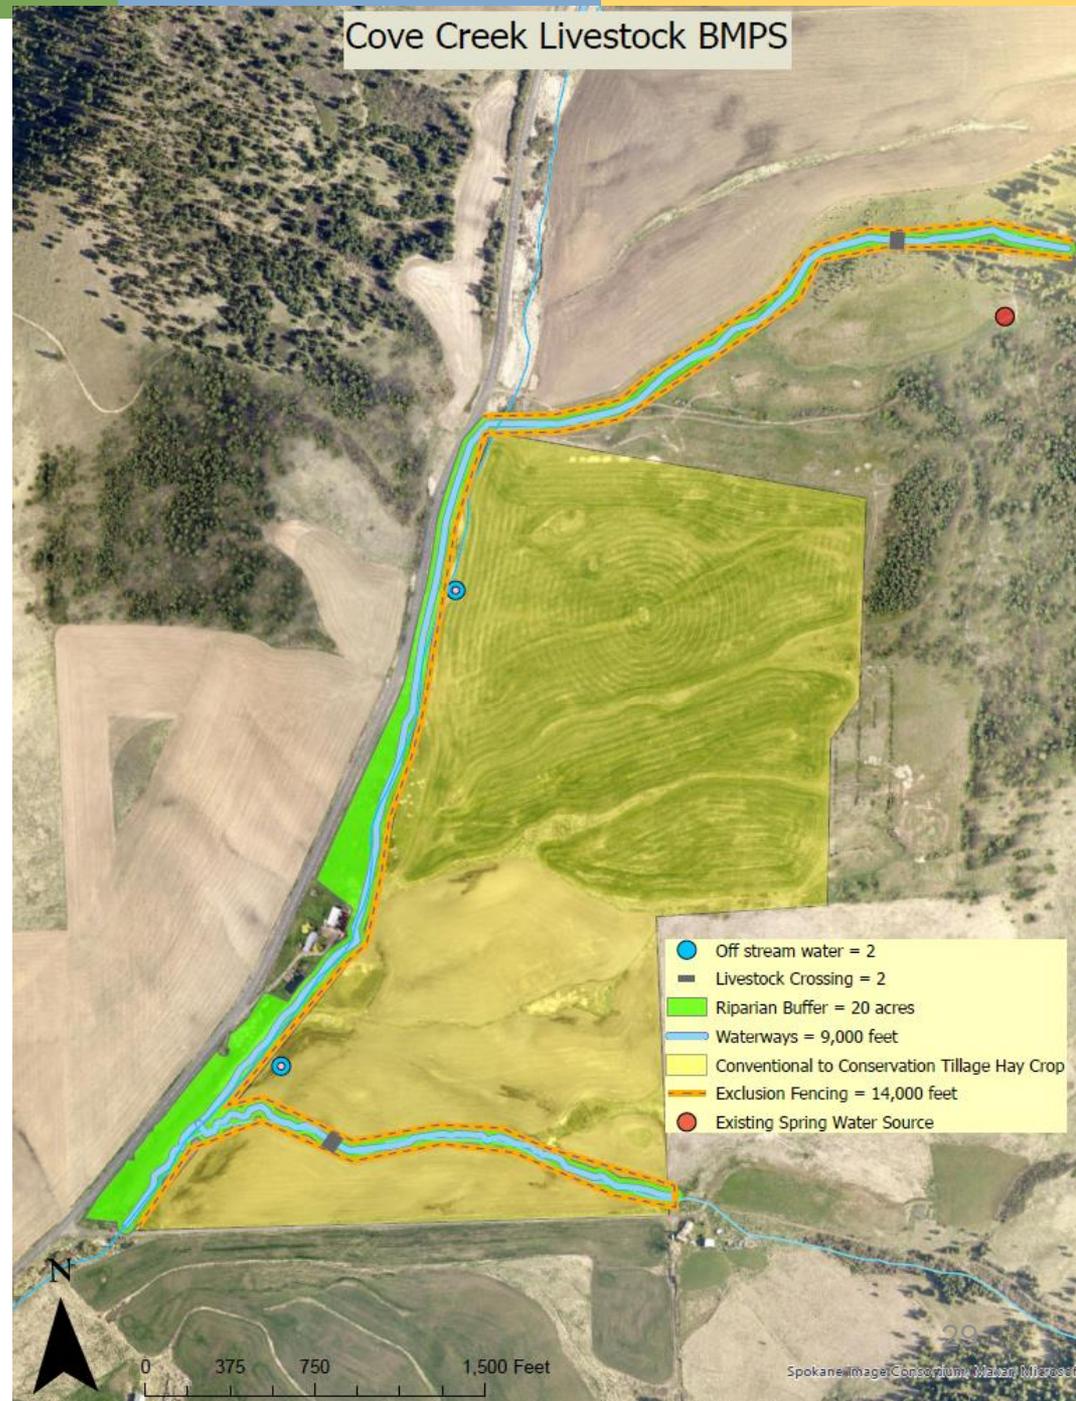

Cove Creek Livestock BMPs - 2023

- Met with landowner several times for livestock pollution and dryland ag erosion concerns
- Found partners and seeking funding
- Working on plan with landowner, NRCS, Spokane CD

Cove Creek Livestock BMPs – 2023/2024

- Protection/restoration 9,000' of Cove Creek mainstem and tributaries
 - Fencing
 - Off-stream watering
 - 20 acre riparian planting
 - Conventional to conservation tillage
- Enrolling into NRCS' Continuous Conservation Reserve Program (CCRP)
- Supplemental grant with Spokane CD – FY23 grant application

Outreach and Education

Implementing the Hangman Outreach Strategy

Highway Signs

- Partnership with The Lands Council/
WSDOT
 - Funded by 319 grant
- 7 signs at crossings
 - Hangman Creek
 - Little Hangman Creek
 - Cove Creek
 - Rock Creek
- State Routes 27 and 278

Purpose

VS.

Latah Creek Golf Course

- Riparian planting and educational sign
- Partners: Spokane County and The Lands Council
- Funded by Terry Husseman Account and 319 grants

Landowner Interviews & Listening Session

- Understand barriers to implementing riparian buffers
 - Ecology experience
- Partnered with UI social scientists
- One-on-one interviews
- Virtual listening session
- Final report in July 2021

\$40 Compensation

Crop and livestock producers: we would like to hear from you!

The University of Idaho and The Lands Council invite crop and livestock producers to an **online listening session** to share their views on installing **riparian buffers** on their land.

We will facilitate a discussion on these questions:

What is your experience (if any) implementing riparian buffers?
What are the barriers to implementing riparian buffers on your land?
How can local organizations (like conservation districts or nonprofits) support producers interested in implementing riparian buffers?

**The information will be used for a report for The Lands Council,
but your name will be kept confidential.**

Tuesday, February 23rd, 8:00 - 9:30 am

Friday, February 26th, 10:00 - 11:30 am

Please use the following link to register by
February 15th (you'll choose one day to attend):

Questions? Contact Avery Lavoie at
alavoie@uidaho.edu or Dr. Chloe Wardropper
at cwardropper@uidaho.edu, (208) 885-7528

Information → Action

- Common barriers by theme
 1. Land/operational management
 - Increased complexity, time, and labor from taking land out of production
 - Weeds, fuel load, nuisance wildlife
 2. Programmatic
 - Complicated, paperwork-intensive
 - Lack of sustained funding, payments not timely
 - Maintenance not provided
 3. Economic
 - Payments insufficient for land value, loss of the most productive land
 - Unanticipated costs
 4. Aesthetic/socio-cultural
 - Woody buffers look “messy” or out of place
- How: conceptual Hangman riparian pilot project
 - Hybridized rental rate program
 - \$1M for pilot project implementation

Hangman Creek Riparian Restoration Program

Pilot Project

Key Program Elements

- Benefits to water quality
 - Targeted at pollution-priority parcels on fish-bearing streams
 - Planted and maintained with long term contracts
 - 15-20 year commitment; add enrolled acres to land deed
 - Development of a permanent riparian program in Hangman watershed
 - Progress towards meeting Settlement Agreement
- Benefits to landowner
 - 15 -20 year contract length provides assurance
 - NRCS Continuous Conservation Reserve Program (CCRP)
 - Rental rate received for land taken out of production - \$350/acre (\$275 on top of CCRP); upfront and lump sum payments
 - Planting and maintenance provided by contract crews (WCC)
- Work with trusted partner to implement program (SCD)
