

KEY TAKE-AWAYS FROM THE JANUARY 19 WORKSHOP!

1. Include basin-wide solutions
2. Tie-in the ASRP more explicitly
3. Address any upstream and downstream impacts resulting from structural interventions, e.g., habitat, cultural resources, agricultural activities, etc.
4. Demonstrate levee design and reliability
5. Set back levees to maximize opportunities for achieving a more geomorphological and stable channel (the “living river” concept)
6. Address I-5 impacts
7. Maximize the Safe Structures Program; clearly define what is meant by safe structures, provide ample funding to ensure that homeowners and tenants at all income levels have opportunities for successful voluntary relocation
8. Be more specific about land use policies, and zoning and building codes necessary to “not make the problem worse”
9. Provide more detailed cost estimates
10. Additional . . .
