[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2304-066

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on April 6, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: April 6, 2023
Laboratory Reference: 2304-066
Project: 14-05806-000

**Case Narrative**

Samples were collected on April 6, 2023 and received by the laboratory on April 6, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: April 6, 2023

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230406 | Water | 23-A006429 | Micro, NUT |
| COUMI-20230406 | Water | 23-A006430 | Micro, NUT |
| TOSMO-20230406 | Water | 23-A006431 | Micro, NUT |
| TYLMO-20230406 | Water | 23-A006432 | Micro, NUT |
| TYLMI-20230406 | Water | 23-A006433 | Micro, NUT |
| MONMN-20230406 | Water | 23-A006434 | Micro, NUT |
| MONMS-20230406 | Water | 23-A006435 | Micro, NUT |
| MONM-20230406 | Water | 23-A006436 | Micro, NUT |
| TOSMI-20230406 | Water | 23-A006437 | Micro, NUT |
| SEIMN-20230406 | Water | 23-A006438 | Micro, NUT |
| COLM-20230406 | Water | 23-A006439 | Micro, NUT |
| SEIMS-20230406 | Water | 23-A006440 | Micro, NUT |
| QA134-20230406 | Water | 23-A006441 | Micro, NUT |

Your samples were received on Friday, April 7, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | NSKV. VandePutte |
| Meter: | Pro DSS #2 |
| Date/Time: | 3/21/23 10:00 |
| Barometric Pressure Start of Day: | mmHg: 758.6 Time: 10:05 |
| Barometric Pressure End of Day: | mmHg: Time: |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 5.2 | 0 | 20.1 | |
| Conductivity (µS/cm) | 952 | 1,000 | 21.2 | |
| Conductivity (µS/cm) | 104.7 | 100 | 20.8 | |
| DO % Saturation | 98.6 | 100 | 20.3 | |
| | 98.1 | | | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 0.7 | 0 | 19.4 | |
| Conductivity (µS/cm) | 97.2 | 100 | 20.6 | |
| DO % Saturation | 94.0 | 100 | 20.0 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2304-245

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on April 21, 2023.

**Please note that the data for the subcontracted analyses will follow in the final report.**

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 4, 2023
Samples Submitted: April 21, 2023
Laboratory Reference: 2304-245
Project: 14-05806-000

**Case Narrative**

Samples were collected on April 20, 2023 and received by the laboratory on April 21, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 4, 2023

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 04-245

Initiated by: NB

Date Initiated: 4/21/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 0.3, 1.3, 0.9, 3.2 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

3.7) Fecals & Turbidity will expire.

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230420 | Water | 23-A007288 | Micro, NUT |
| COUMI-20230420 | Water | 23-A007289 | Micro, NUT |
| TOSMO-20230420 | Water | 23-A007290 | Micro, NUT |
| TYLMO-20230420 | Water | 23-A007291 | Micro, NUT |
| TYLMI-20230420 | Water | 23-A007292 | Micro, NUT |
| MONMN-20230420 | Water | 23-A007293 | Micro, NUT |
| MONMS-20230420 | Water | 23-A007294 | Micro, NUT |
| MONM-20230420 | Water | 23-A007295 | Micro, NUT |
| TOSMI-20230420 | Water | 23-A007296 | Micro, NUT |
| SEIMN-20230420 | Water | 23-A007297 | Micro, NUT |
| COLM-20230420 | Water | 23-A007298 | Micro, NUT |
| SEIMS-20230420 | Water | 23-A007299 | Micro, NUT |
| QA135-20230420 | Water | 23-A007300 | Micro, NUT |

Your samples were received on Friday, April 21, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 04-245

Initiated by: NB

Date Initiated: 4/21/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 0.3, 1.3, 0.9, 3.2 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

3.7) Fecals & Turbidity will expire.

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column. [2] Pre-extraction holding time. [3] Goal applies to surrogate standard. [4] The criterion are analyte specific; the goal shows the minimum and maximum ranges for analytes.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported; SURR – Surrogate standard

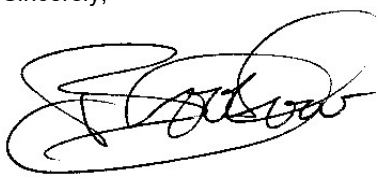
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2304-315



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on April 27, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: April 27, 2023
Laboratory Reference: 2304-315
Project: 14-05806-000

**Case Narrative**

Samples were collected on April 27, 2023 and received by the laboratory on April 27, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230427 | Water | 23-A007584 | Micro, NUT |
| COUMI-20230427 | Water | 23-A007585 | Micro, NUT |
| TOSMO-20230427 | Water | 23-A007586 | Micro, NUT |
| TYLMO-20230427 | Water | 23-A007587 | Micro, NUT |
| TYLMI-20230427 | Water | 23-A007588 | Micro, NUT |
| MONMN-20230427 | Water | 23-A007589 | Micro, NUT |
| MONMS-20230427 | Water | 23-A007590 | Micro, NUT |
| MONM-20230427 | Water | 23-A007591 | Micro, NUT |
| TOSMI-20230427 | Water | 23-A007592 | Micro, NUT |
| SEIMN-20230427 | Water | 23-A007593 | Micro, NUT |
| COLM-20230427 | Water | 23-A007594 | Micro, NUT |
| SEIMS-20230427 | Water | 23-A007595 | Micro, NUT |
| QA136-20230427 | Water | 23-A007596 | Micro, NUT |

Your samples were received on Thursday, April 27, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 04-315

Initiated by: NB

Date Initiated: 4/27/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 4.4, 3.3, 4.5, 2.3 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 | |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 | |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 | |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | 1 2 3 4 | |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 | |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 | |

## 3.0 Sample Verification

| | | | | | |
|---|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 | |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 | |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 | |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 | |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 | |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 | |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 | |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 | |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 | |

**Explain any discrepancies:**

2.4) #1 - labels for PAH & 6PPD-q read @ 11:00.
#2 - labels for PAH & 6PPD-q read @ 10:35.

3.7) Fecal Coliform will expire in < 24 hours.

1 - Discuss issue in Case Narrative
2 - Process Sample As-is
3 - Client contacted to discuss problem
4 - Sample cannot be analyzed or client does not wish to proceed

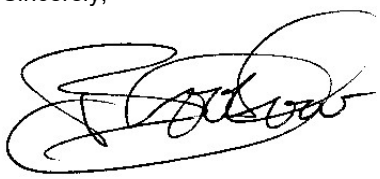
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2305-051



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on May 5, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: May 5, 2023
Laboratory Reference: 2305-051
Project: 14-05806-000

**Case Narrative**

Samples were collected on May 5, 2023 and received by the laboratory on May 5, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230505 | Stormwater | 23-A008141 | Micro, NUT |
| COUMI-20230505 | Stormwater | 23-A008142 | Micro, NUT |
| TOSMO-20230505 | Stormwater | 23-A008143 | Micro, NUT |
| TYLMO-20230505 | Stormwater | 23-A008144 | Micro, NUT |
| TYLMI-20230505 | Stormwater | 23-A008145 | Micro, NUT |
| MONMN-20230505 | Stormwater | 23-A008146 | Micro, NUT |
| MONMS-20230505 | Stormwater | 23-A008147 | Micro, NUT |

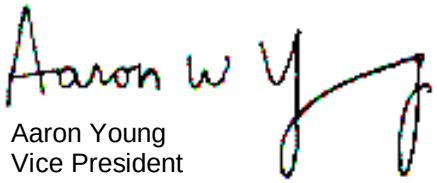
| SEIMS-20230505 | Stormwater | 23-A008152 | Micro, NUT |
| QA137-20230505 | Stormwater | 23-A008153 | Micro, NUT |

Your samples were received on Friday, May 5, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.



The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 05-051

Initiated by: MW

Date Initiated: 5/5/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 6,6,6,6 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | (Yes) | No | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

2.4 & 3.2) #12) IL ID illegible

3.7) Coliform will expire < 24hrs

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

# CHAIN OF CUSTODY

14648 NE 95th Street, Redmond, WA 98052
Telephone: 425.883.3881

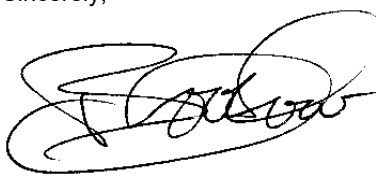
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2307-049



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 11, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: August 24, 2023
Samples Submitted: July 11, 2023
Laboratory Reference: 2307-049
Project: 14-05806-000

**Case Narrative**

Samples were collected on July 11, 2023 and received by the laboratory on July 11, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230711 | Water | 23-A011853 | Micro, NUT |
| COUMI-20230711 | Water | 23-A011854 | Micro, NUT |
| TOSMO-20230711 | Water | 23-A011855 | Micro, NUT |
| TYLMO-20230711 | Water | 23-A011856 | Micro, NUT |
| TYLMI-20230711 | Water | 23-A011857 | Micro, NUT |
| MONMN-20230711 | Water | 23-A011858 | Micro, NUT |
| MONMS-20230711 | Water | 23-A011859 | Micro, NUT |
| MONM-20230711 | Water | 23-A011860 | Micro, NUT |
| TOSMI-20230711 | Water | 23-A011861 | Micro, NUT |
| SEIMN-20230711 | Water | 23-A011862 | Micro, NUT |
| COLM-20230711 | Water | 23-A011863 | Micro, NUT |
| SEIMS-20230711 | Water | 23-A011864 | Micro, NUT |
| QA138-20230711 | Water | 23-A011865 | Micro, NUT |

Your samples were received on Tuesday, July 11, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

Case Narrative:

The sample identified as QA138-20230711 has a sampled time of 12:00 on the bottle and 13:10 on COC.

No further corrective action was taken.

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | N. VandePutte |
| Meter: | ProDSS #2 |
| Date/Time: | 6/12/23 14:30 |
| Barometric Pressure Start of Day: | mmHg: 769.6 Time: 14:30 |
| Barometric Pressure End of Day: | mmHg: 766.6 Time: 15:00 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 8.5 | 0 | 21.7 | |
| Conductivity (µS/cm) | 953 | 1,000 | 21.7 | |
| Conductivity (µS/cm) | 103.0 | 100 | 21.5 | |
| DO % Saturation | 102.0 | 100 | 21.5 | |

7/11/23

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 8.2 | 0 | 22.5 | |
| Conductivity (µS/cm) | 98.3 | 100 | 22.4 | |
| DO % Saturation | 101.0 | 100 | 22.4 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

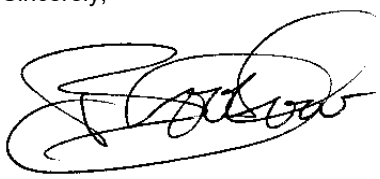
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-253



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 25, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: October 27, 2023
Samples Submitted: September 25, 2023
Laboratory Reference: 2309-253
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 25, 2023 and received by the laboratory on September 25, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Your samples were received on Monday, September 25, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 09-253

Initiated by: JMV

Date Initiated: 9/25/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 6,6,6,6 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | (Yes) | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

2.4) #6,7,10) no 0925 on labels
#8) no 0925 on 1/2L $HNO_3$ poly
#9) no 0925 on 1/4L $H_2SO_4$ poly
3.2) #11) ID illegible on 1/4L $H_2SO_4$ poly
2.4) #13) QA139-20230925 on labels

1 - Discuss issue in Case Narrative
2 - Process Sample As-is
3 - Client contacted to discuss problem
4 - Sample cannot be analyzed or client does not wish to proceed

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | NV |
| Meter: | ProDSS #1 |
| Date/Time: | 9/25/23 @ 10:00 |
| Barometric Pressure Start of Day: | mmHg: 758.1 Time: 10:00 |
| Barometric Pressure End of Day: | mmHg: 758.2 Time: 16:10 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 20.3 | 0 | 21.9 | |
| Conductivity (µS/cm) | 1000 | 1,000 | 22.1 | |
| Conductivity (µS/cm) | | 100 | | out of standard |
| DO % Saturation | 96.2 | 1000 | | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 21.6 | 0 | 22.9 | |
| Conductivity (µS/cm) | 989 | 1000 | 23.3 | out of 100 µS/cm standard, used 1000 µS/cm |
| DO % Saturation | 95.9 | 1000 | | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 19.6 | 0 | 21.5 | |
| Conductivity (µS/cm) | 996 | 1000 | 21.9 | out of 100 µS/cm standard, used 1000 µS/cm |
| DO % Saturation | 91.7 | 1000 | 21.89 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

## Data Validation Memorandum for Water Quality Monitoring

HERRERA
Science + Planning + Design

# Herrera Environmental Consultants, Inc.
# Internal Memorandum

**Date:** May 15, 2024

**To:** Project File

**From:** Nikki VandePutte

**Subject:** Data Quality Assurance Review of the Redmond Paired Watershed Stormwater Retrofit Effectiveness Water Quality Monitoring Data – Water Year 2023

---

## Data Quality Assurance Review

This memorandum presents a review of data quality for 208 water samples (including 16 field duplicates) collected for the Redmond Paired Watershed Stormwater Retrofit Effectiveness Study between September 27, 2022, and September 25, 2023 (Table 1). OnSite Environmental, Inc., of Redmond, Washington, analyzed the samples for:

- Total suspended solids (TSS) by Standard Method 2540D
- Turbidity by EPA Method 180.1
- Hardness by Standard Method 2340B
- Dissolved organic carbon (DOC) by Standard Method 5310B
- Total phosphorus by EPA Method 365.1
- Total and dissolved metals (copper and zinc) by EPA Method 200.8
- Polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270E-SIM

In addition, AmTest Inc., of Kirkland, Washington, analyzed the samples for:

- Total nitrogen (total Kjeldahl nitrogen [TKN] and nitrate + nitrite nitrogen) by Standard Method 4500-N and 4500-NO3, respectively
- Fecal coliform by Standard Method 9222D.

SGS AXYS Analytical Services of Sidney, British Columbia, Canada, analyzed samples from four locations (COUMO, COUMI, TOSMO and TOSMI) for 6PPD-quinone (6PPD-q) by Method MLA-118.

**Table 1. Water Year 2023 Samples.**

| Date Collected | Lab SDG | Samples Collected | QC Samples Collected |
|---|---|---|---|
| 9/27/2022[ab] | 2209-267 | 11 stations | 1 field duplicate |
| 10/21/2022[b] | 2210-222 | 11 stations | 1 field duplicate |
| 10/26/2022[c] | 2210-298 | 4 stations | NA |
| 11/22/2022 | 2211-296 | 12 stations | 1 field duplicate |
| 11/29/2022[d] | 2211-351 | 8 stations | 1 field duplicate |
| 11/30/2022[d] | 2212-001 | 3 stations | NA |
| 1/8/2023 | 2301-049 | 12 stations | 1 field duplicate |
| 1/12/2023 | 2301-084 | 12 stations | 1 field duplicate |
| 1/20/2023 | 2301-173 | 12 stations | 1 field duplicate |
| 2/7/2023 | 2302-068 | 12 stations | 1 field duplicate |
| 3/2/2023 | 2303-020 | 12 stations | 1 field duplicate |
| 3/13/2023 | 2303-124 | 12 stations | 1 field duplicate |
| 4/6/2023 | 2304-066 | 12 stations | 1 field duplicate |
| 4/20/2023 | 2304-245 | 12 stations | 1 field duplicate |
| 4/27/2023 | 2304-315 | 12 stations | 1 field duplicate |
| 5/5/2023 | 2305-051 | 12 stations | 1 field duplicate |
| 7/11/2023 | 2307-049 | 12 stations | 1 field duplicate, 1 filter blank |
| 9/25/2023[b] | 2309-253 | 11 stations | 1 field duplicate, 1 filter blank, 1 transfer blank |

[a] The 9/27/2022 event was within Water Year (WY) 2022, but is included in WY 2023 since it was only 5 days from the start of the WY.

[b] COLM was dry on 9/27/2022, 10/21/2022, and 9/25/2023, so samples could not be collected.

[c] Samples were only collected for 6PPD-q and PAHs on this date.

[d] The sampling event on 11/29/2023 was terminated early due to weather-related safety concerns. The missed stations were sampled the next day, except for SEIMS.

The laboratory's performance was reviewed in accordance with quality control (QC) criteria established in the *Redmond Paired Watershed Study Quality Assurance Project Plan* (QAPP) (Herrera 2015) and *Addendum 1 to the Quality Assurance Project Plan for the Redmond Paired Watershed Study* (Herrera 2022), by the laboratory, and in the specified methods.

Quality control data summaries submitted by the laboratory were reviewed; raw data were not submitted by the laboratory. Data Quality Assurance Worksheets were completed for each laboratory report. Data qualifiers (flags) were added to the sample results in the laboratory reports. Data validation results are summarized below, followed by definitions of data qualifiers.

## Custody, Preservation, Holding Times, and Completeness – Acceptable with Qualification

The samples were properly preserved, and sample custody was maintained from sample collection to receipt at the laboratory. Samples were analyzed within the required method holding times, with the exceptions noted below and summarized in Table 2. The laboratory reports were complete and contained results for all samples and tests requested on the chain-of-custody (COC) forms.

- The lab reanalyzed all TSS samples collected on September 27, 2022, except MONM, outside of holding time (10 days versus 7-day holding time) due to low spike blank recovery. The affected results were qualified as estimated (flagged J) due to the holding time exceedance.
- Fecal coliform samples collected on 10/21/2022 were submitted to OnSite on a Friday just before the lab closed. The samples were delivered to AmTest and analyzed the following Monday and were qualified as estimated due to the holding time exceedance (3 days versus 1-day holding time).
- Forty-three 6PPD-q samples were extracted outside the 14-day extraction holding time specified in the QAPP. No data were qualified because they were extracted within the laboratory's 35-day holding time.
- The 6PPD-q sample collected at COUMI on February 7, 2023, was extracted outside of QAPP and laboratory holding time (64 days versus laboratory's 35-day holding time) and qualified as estimated.
- The 6PPD-q sample collected at COUMI on March 2, 2023, was extracted outside of QAPP and laboratory holding time (41 days versus laboratory's 35-day holding time) and qualified as estimated.

Samples were collected at all stations for every event, with the following exceptions:

- The event on November 29, 2022, was terminated early due to unsafe weather conditions. Eight stations were sampled November 29, and three stations were sampled the next day, November 30, 2022. Station SEIMS was not sampled either day due to continued unsafe conditions the following day.
- On the September 27, 2022, October 21, 2022, and September 25, 2023, events, there was no flow at station COLM and samples could not be collected.

**Table 2. Data Qualified due to Holding Time Exceedances.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | Flag |
|---|---|---|---|---|---|
| 9/27/2022 | 2209-267 | All Locations, except MONM | TSS | Holding time exceedance | J |
| 10/21/2022 | 2210-222 | All Locations | Fecal Coliform | Holding time exceedance | J |
| 2/7/2023 | 2301-068 | COUMI | 6PPD-q | Extraction holding time exceedance | J |
| 3/2/2023 | 2303-020 | COUMI | 6PPD-q | Extraction holding time exceedance | J |

## Laboratory Reporting Limits – Acceptable with Discussion

The laboratory reporting limits met those established in the QAPP with some exceptions. The reporting limits for total suspended solids (19 samples), turbidity (7 samples), total phosphorus (1 sample), total copper (3 samples), total zinc (9 samples), dissolved zinc (1 sample), fecal coliform (39 samples), and 6PPD-q (20 samples) were slightly elevated; however, data quality was not affected because the samples were detected above the reporting limit. Reporting limits for PAHs (26 samples) were slightly elevated (0.11-0.13 versus 0.1 ng/L, or 0.011-0.013 versus 0.01 ng/L), with some undetected values; however, the increased RLs were very slight and data quality was not affected. No data were qualified based on laboratory reporting limits.

## Method Blank Analysis – Acceptable with Qualification

Method blanks were analyzed at the required frequency. Method blanks did not contain levels of target analytes above the laboratory reporting limits, with one exception:

- The method blank analyzed with 6PPD-q samples collected on July 11, 2023, had a detection above the reporting limit (0.12 ng/L versus reporting limit of 0.1). One associated sample, COUMO, was qualified as estimated because the concentration was within five times the concentration detected in the method blank, as specified in the QAPP addendum (Herrera 2022).

While the method blank analyzed with 6PPD-q samples collected in January 2023 (January 8, 12, and 20) was undetected, the reporting limit was elevated (0.65 ng/L versus goal of 0.1 ng/L). The laboratory qualified the method blank result as estimated due to low surrogate recovery for the method blank (3 percent versus minimum 30 percent) but noted that the method of quantification produces data that are recovery corrected. To account for potential undetected blank contamination, the one associated sample result (COUMI on January 20, 2023 [0.57 ng/L]) below the blank reporting limit was qualified as estimated (flagged J).

Data qualified due to method blank results are listed in Table 3.

**Table 3. Data Qualified due to Method Blank Results.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | Flag |
|---|---|---|---|---|---|
| 7/11/2023 | 2307-049 | COUMO | 6PPD-q | Method blank contamination | J |
| 1/20/2023 | 2301-173 | COUMI | 6PPD-q | Elevated method blank reporting limit | J |

## Filter Blank Analysis – Acceptable with Discussion

Filter blanks were collected on July 11 and September 25, 2023, and analyzed for DOC and dissolved copper and zinc, as required by the QAPP. With the exception noted below, the filter blanks did not contain levels of target analytes above the laboratory reporting limits.

The filter blank collected on July 11, 2023, had a reported result for DOC (1.7 mg/L) that exceeded the 1.0 mg/L reporting limit. However, because the reported result was less than two times the reporting limit, no data were qualified.

## Transfer Blank Analysis – Acceptable with Qualification

A transfer blank was collected on September 25, 2023, and analyzed for all parameters, as required by the QAPP. With the exception noted below, the transfer blank did not contain levels of target analytes above the laboratory reporting limits.

The transfer blank had a reported result for TSS (4.6 mg/L) that exceeded the 1.0 mg/L reporting limit. TSS results collected on September 25, 2023, that are within 5 times the blank concentration (23 mg/L) are qualified as estimated. The affected samples are COUMO, TYLMI, and MONMS.

## Laboratory Control Sample Analysis – Acceptable with Qualification

Laboratory control samples (LCS) were analyzed with project samples for TSS, hardness, DOC, total phosphorus, and total nitrogen at the required frequency. With the exception noted below, the percent recovery values for all parameters met the criteria established in the QAPP.

- The LCS analyzed for TSS samples from September 27, 2022, was below recovery criteria (27 percent versus minimum 67 percent). All samples were reanalyzed, except for MONM due to insufficient sample volume. Sample MONM was qualified as estimated.
- The LCS analyzed for TSS samples from October 21, 2022, was slightly above the criteria (121 percent versus maximum 120 percent). No data were qualified.
- The LCS analyzed for TSS samples from January 12, 2023, was slightly below recovery criteria (76 percent versus minimum 80 percent). This recovery was within the laboratory's limits, and no data were qualified.

## Matrix Spike Analysis – Acceptable

Matrix spike samples were analyzed for hardness, DOC, total phosphorus, total nitrogen, total copper and zinc, and dissolved copper and zinc. The percent recovery values for all parameters met the control limits established in the QAPP.

## Surrogate Standard Recovery Analysis– Acceptable with Qualification

Surrogate standards were analyzed with project samples for PAHs and 6PPD-q. With the exceptions noted below and provided in Table 4, the percent recovery values met the control limits established in the QAPP.

- Surrogate standards were analyzed for samples COUMO, TOSMO, and TOSMI collected on February 7, 2023, for 6PPD-q. The percent recoveries were below the criteria (2, 11, and 22 percent versus minimum 30 percent). The corresponding project sample results were qualified as estimated.
- A surrogate standard was analyzed for sample COUMO collected on March 2, 2023, for 6PPD-q. The percent recovery was below the criteria (6 percent versus minimum 30 percent). The project sample result was qualified as estimated.
- Surrogate standards were analyzed for samples COUMO and TOSMO collected on April 27, 2023, for 6PPD-q. The percent recoveries were below the criteria (12 and 23 percent versus minimum 30 percent). The corresponding project sample results were qualified as estimated.

**Table 4. Data Qualified due to Surrogate Standard Recovery.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | Flag |
|---|---|---|---|---|---|
| 2/7/2023 | 2301-068 | COUMO, TOSMO, TOSMI | 6PPD-q | Low surrogate recovery | J |
| 3/2/2023 | 2303-020 | COUMO | 6PPD-6 | Low surrogate recovery | J |
| 4/27/2023 | 2304-315 | COUMO, TOSMO | 6PPD-q | Low surrogate recovery | J |

## Laboratory Duplicate Analysis – Acceptable with Qualification

Laboratory duplicate samples were analyzed for all parameters. For project samples, the relative percent difference (RPD) was calculated for each analyte where both duplicate values were greater than five times the reporting limit (RL). The difference between duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the duplicate. The RPD values or difference values met the control limits established by the laboratory or specified method, with the exceptions noted below.

- The RPD between the fecal coliform sample from SEIMS collected on October 21, 2022, and the laboratory duplicate (42 percent) exceeded the less than 35 percent criterion. The result was qualified as estimated.
- The RPD between the TSS sample from TOSMO collected on January 20, 2023, and the laboratory duplicate (27 percent) slightly exceeded the less than 25 percent criterion. No data were qualified because the exceedance was slight, and a second laboratory duplicate met the criterion.
- The difference between the fecal coliform sample from MONM collected on February 7, 2023, and the laboratory duplicate was greater than two times the reporting limit (7 CFU/ml versus reporting limit of 1 CFU/ml). The result was qualified as estimated.
- The laboratory duplicate analyzed for fecal coliform samples collected March 2, 2023, was a duplicate of a batch sample (i.e., not a sample collected for this project). The difference between the two samples (6 CFU/100mL) was greater than two times the reporting limit. No data were qualified because the duplicate was not associated with a project sample and the other laboratory and field duplicates met the control criterion.
- The laboratory duplicate analyzed for fecal coliform samples collected March 13, 2023, was a duplicate of a batch sample. The RPD between the samples (100 percent) exceeded the less than 35 percent criterion. No data were qualified because the duplicate was not associated with a project sample and the other laboratory duplicate was within limits.
- The laboratory duplicate analyzed for fecal coliform samples collected April 6, 2023, was a duplicate of a batch sample. The RPD between the sample and duplicate (67 percent) exceeded the less than 35 percent criterion. No data were qualified because the duplicate was not associated with a project sample and the other laboratory and field duplicates were in control.

Results qualified due to laboratory duplicate exceedances are shown in Table 5.

**Table 5. Data Qualified due to Laboratory Duplicate Exceedance.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | Flag |
|---|---|---|---|---|---|
| 10/21/2022 | 2210-222 | SEIMS | Fecal coliform | Lab duplicate exceedance | J |
| 2/7/2023 | 2301-068 | MONM | Fecal coliform | Lab duplicate exceedance | J |

## Field Duplicate Analysis – Acceptable with Qualification

Field duplicates were analyzed for all parameters at the required frequency (16 field duplicates). The RPD was calculated for each analyte where both the values were greater than five times the RL. The difference between the duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the field duplicate. With the exceptions noted below and in Table 6, the RPD values or difference values met the control limits established in the QAPP.

- A field duplicate was analyzed for sample COUMI collected on October 21, 2022, for total zinc. The RPD between the sample and field duplicates (21 percent) slightly exceeded the less than 20 percent criterion. The result was not qualified due to the slight exceedance.
- A field duplicate was analyzed for sample COUMI collected on May 5, 2023, for total zinc. The RPD between the sample and field duplicates (24 percent) slightly exceeded the less than 20 percent criterion. The result was not qualified due to the slight exceedance.

As shown in Table 6, 18 field duplicate values did not meet the criteria established in the QAPP. The sample and associated duplicate were qualified as estimated due to the field duplicate exceedance.

**Table 6. Data Qualified due to Field Duplicate RPD or Difference.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | RPD or difference | Criteria | Flag |
|---|---|---|---|---|---|---|---|
| 11/22/2022 | 2211-296 | MONM | Fecal Coliform | Field duplicate RPD exceedance | 57% | <50% | J |
| 1/8/2023 | 2301-049 | COUMO | Fecal Coliform | Field duplicate RPD exceedance | 78% | <50% | J |
| 1/12/2023 | 2301-084 | COLM | Fecal Coliform | Field duplicate difference exceedance | 7 CFU/ 100mL | <2 CFU /mL | J |
| 1/20/2023 | 2301-173 | COUMO | 6PPD-q | Field duplicate RPD exceedance | 80% | <50% | J |
| 3/2/2023 | 2303-020 | MONMS | TSS | Field duplicate RPD exceedance | 56% | <25% | J |
| 3/13/2023 | 2303-124 | SEIMS | Fecal Coliform | Field duplicate RPD exceedance | 67% | <50% | J |
| 4/6/2023 | 2304-066 | TOSMO | TSS | Field duplicate RPD exceedance | 173% | <25% | J |
| 4/6/2023 | 2304-066 | TOSMO | Turbidity | Field duplicate RPD exceedance | 151% | <25% | J |

**Table 6 (continued). Data Qualified due to Field Duplicate RPD or Difference.**

| Date Collected | Lab SDG | Sample Location | Parameter | Reason for Qualification | RPD or difference | Criteria | Flag |
|---|---|---|---|---|---|---|---|
| 7/11/2023 | 2307-049 | TYLMI | Turbidity | Field duplicate RPD exceedance | 93% | <25% | J |
| 7/11/2023 | 2307-049 | TYLMI | Total Phosphorus | Field duplicate difference exceedance | 0.05 mg/L | <0.02 mg/L | J |
| 9/25/2023 | 2309-253 | TYLMO | Fecal Coliform | Field duplicate RPD exceedance | 84% | <50% | J |

## *In Situ* Data Review – Acceptable with Qualification

Herrera conducted a quality assurance audit of the *in situ* data to ensure that data were accurately transcribed from the field forms. Dissolved oxygen, temperature, and conductivity values were correctly transcribed and are within expected ranges, with the exceptions noted below and summarized in Table 7.

- All *in situ* measurements at stations COUMI and TOSMO from September 27, 2022, and stations TOSMO and TYLMI from January 12, 2023, were rejected (flagged R) due to suspected transcription errors. Typically, field staff take a photo of the field meter and transcribe the measurements onto a field sheet upon returning to the vehicle. All recorded *in situ* values for the two stations in each event were exactly the same, indicating that the incorrect photo may have been transcribed for one station in each event.
- Dissolved oxygen measurements at COUMO and TYLMI from January 12, 2023 (16.9 mg/L and 17.7 mg/L, respectively), were rejected due to suspected high bias. The maximum recorded values for these stations are 14.34 and 14.06 mg/L, respectively. The equivalent calculated percent saturation values of 139 and 142 percent, respectively, were outside of the expected range for typical streams (typically 80 to 120 percent). A rented YSI 556 meter was used for these measurements. The pre-event calibration was acceptable; however, no post-event calibration was performed. Dissolved oxygen measurements taken with the same meter at other sites (COUMI, MONM, and SEIMS) were qualified as estimated, due to the potential calibration issue.
- Two dissolved oxygen measurements were recorded as percent saturation rather than concentration. These values (101 percent for COUMI-20230207 and 100.7 percent for TYLMO2023-0207) were converted to concentration (12.35 and 12.43 mg/L, respectively) and qualified as estimated.
- The conductivity measurement taken at COUMI on February 7, 2023, was below the 10$^{th}$ percentile of historical data (12.18 versus 105 uS/cm). The closeness of the recorded value to the calculated dissolved oxygen value (12.35 mg/L) indicates a potential transcription error, and the result was rejected.
- The post-event calibration check for the February 7, 2023, event showed a low conductivity reading (78 uS/cm in 100 uS/cm calibration standard solution) indicating a potential low bias for

measurements taken with this meter. All conductivity results from this date were qualified as estimated.

- One dissolved oxygen measurement was recorded incorrectly (119.6 mg/L for TYLMI-20230427). The recorded percent saturation (96.7 percent) was converted to concentration (10.3 mg/L) and qualified as estimated.

**Table 7. Qualified *In Situ* Data.**

| Date Collected | Sample Location | Parameter | Reason for Qualification | Flag |
|---|---|---|---|---|
| 9/27/2022 | COUMI, TOSMO | Temperature, Conductivity, DO | Suspected transcription error | R |
| 1/12/2023 | COUMO, TYLMI | DO | Values outside expected range | R |
| 1/12/2023 | COUMI, MONM, SEIMS | DO | Potential meter calibration error | J |
| 1/12/2023 | TOSMO & TYLMO | Temperature, Conductivity, DO | Suspected transcription error | R |
| 2/7/2023 | All | Conductivity | Post event meter calibration check | J |
| 2/7/2023 | COUMI, TYLMO | DO | Value converted from percent saturation to concentration | J |
| 2/7/2023 | COUMI | Conductivity | Suspected transcription error | R |
| 4/27/2023 | TYLMI | DO | Value converted from percent saturation to concentration | J |

## Corrective Actions

Procedures for *in situ* data collection have recently been updated to ensure *in situ* data accuracy and prevent transcription errors, including:

- Post event calibration checks are consistently performed and recorded starting with the February 7, 2023, event.
- Field staff are recording which field meter they use on every field sheet.
- Field staff are comparing *in situ* data measurements to typical ranges immediately after data collection and checking meter calibration if inaccuracies are suspected.
- When measurements are transcribed from photos of the field meter, the photos and field sheets will be shared with the data reviewer within one day of the sampling event. The data reviewer will ensure the photos were accurately transcribed onto the field sheets.

# Definition of Data Qualifiers

The following are data qualifier definitions (Table 8) applied for this project.

**Table 8. Data Qualifier Definitions.**

| Data Qualifier | Definition |
|---|---|
| J | Value is an estimate based on analytical results |
| R | Value is rejected based on analytical results |
| U | Value is below the reporting limit |
| UJ | Value is below the reporting limit and is an estimate based on analytical results |

ug/L: micrograms per liter
All summary statistics were calculated using values of half the reporting limit for non-detect values.
Percentage of base flow and storm event samples violating chronic and acute criteria for fresh water aquatic life protection, respectively, from Washington Adminstrative Code 173-201A. Criterion were derived using measured hardness at each station (see Table H-13).

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2307-030

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 7, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: July 7, 2023
Laboratory Reference: 2307-030
Project: 14-05806-000

**Case Narrative**

Samples were collected on July 6, 2023 and received by the laboratory on July 7, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2307-092

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 13, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: July 13, 2023
Laboratory Reference: 2307-092
Project: 14-05806-000

**Case Narrative**

Samples were collected on July 13, 2023 and received by the laboratory on July 13, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2307-119

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 18, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: July 18, 2023
Laboratory Reference: 2307-119
Project: 14-05806-000

**Case Narrative**

Samples were collected on July 18, 2023 and received by the laboratory on July 18, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; RL – reporting limit

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2307-202

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on July 25, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: July 25, 2023
Laboratory Reference: 2307-202
Project: 14-05806-000

**Case Narrative**

Samples were collected on July 25, 2023 and received by the laboratory on July 25, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-010

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 1, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 1, 2023
Laboratory Reference: 2308-010
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 1, 2023 and received by the laboratory on August 1, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 08-010

Initiated by: JMV

Date Initiated: 8/1/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 0 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

2.4) #1,2) CRTY on labels - COC is correct. JJV

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-116

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 9, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 9, 2023
Laboratory Reference: 2308-116
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 9, 2023 and received by the laboratory on August 9, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

Initiated by: NB

OnSite Project Number: 08-116

Date Initiated: 8/9/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: | 18.4 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-142

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 11, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 11, 2023
Laboratory Reference: 2308-142
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 11, 2023 and received by the laboratory on August 11, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 08-142

Initiated by: MW

Date Initiated: 8/11/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: 18 | |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | | |
|---|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 | |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 | |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 | |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 | |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 | |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 | |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 | |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 | |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 | |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-173

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 16, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 16, 2023
Laboratory Reference: 2308-173
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 16, 2023 and received by the laboratory on August 16, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Semivolatiles EPA 8270E/SIM Analysis

The RPD for Pyrene is outside the control limits for the Spike Blank/Spike Blank Duplicate. The percent recoveries on both spike blanks are within recovery limits. The method allows for a percentage of the compounds to fall outside of the control limits due to the large number of analytes being spiked.

**Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 08-173

Initiated by: MV

Date Initiated: 8/16/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: | 13 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

| |
|---|
| |
| |
| |
| |
| |
| |

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-214

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 18, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 18, 2023
Laboratory Reference: 2308-214
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 18, 2023 and received by the laboratory on August 18, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Semivolatiles EPA 8270E/SIM Analysis

Sample SIDL-2-R had one surrogate recovery outside of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

Bis(2-Ethylhexyl)phthalate was found in the method blank. Sample SIDL-2-R was non-detect for that compound. There was not enough sample for re-extraction; therefore, no further action was taken.

**Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

Initiated by: KP

OnSite Project Number: 08-214

Date Initiated: 8/18/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: | 20° |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-213

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 18, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: August 18, 2023
Laboratory Reference: 2308-213
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 18, 2023 and received by the laboratory on August 18, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Semivolatiles EPA 8270E/SIM Analysis

Bis(2-Ethylhexyl)phthalate was found in the method blank. Sample TYLR-2R-2027 was non-detect for that compound. There was not enough sample for re-extraction; therefore, no further action was taken.

**Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| TYLR-2R-2023 | Sludge | 23-A015348 | DEM |

Your sample was received on Monday, September 11, 2023. At the time of receipt, the sample was logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

## Demand

| PARAMETER | RESULT | UNITS | Q | D.L. | METHOD | ANALYST | DATE |
|---|---|---|---|---|---|---|---|
| Total Organic Carbon | 7.2 | % | | 0.05 | SW 846 9060 | NNL | 10/05/23 |

Case Narrative:

All TOC soil samples were run in quadruplicate and reported as an average of the four readings.

No further corrective action was taken.

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 08-213

Initiated by: MW

Date Initiated: 8/18/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 6 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-278

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 24, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 28, 2023
Samples Submitted: August 24, 2023
Laboratory Reference: 2308-278
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 24, 2023 and received by the laboratory on August 24, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| TOSH-2R | Soil | 23-A016098 | DEM |

Your sample was received on Wednesday, September 20, 2023. At the time of receipt, the sample was logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 08-278

Initiated by: MV

Date Initiated: 8/24/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: | 15 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2308-312

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on August 28, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 28, 2023
Samples Submitted: August 28, 2023
Laboratory Reference: 2308-312
Project: 14-05806-000

**Case Narrative**

Samples were collected on August 28, 2023 and received by the laboratory on August 28, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| TOSH-4R-2023 | Soil | 23-A016099 | DEM |

Your sample was received on Wednesday, September 20, 2023. At the time of receipt, the sample was logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05804-000

Initiated by: NB

OnSite Project Number: 08-312

Date Initiated: 8/28/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 5.4 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-042

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 7, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: September 7, 2023
Laboratory Reference: 2309-042
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 7, 2023 and received by the laboratory on September 7, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 09-042

Initiated by: MV

Date Initiated: 3/7/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: 17 | |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

| |
|---|
| |
| |
| |
| |
| |
| |

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-055

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 8, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: September 8, 2023
Laboratory Reference: 2309-055
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 8, 2023 and received by the laboratory on September 8, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 09-055

Initiated by: MV

Date Initiated: 9/8/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: | 17 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

## Explain any discrepancies:

| |
|---|
| |
| |
| |
| |
| |
| |

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-088

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 12, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: September 12, 2023
Laboratory Reference: 2309-088
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 12, 2023 and received by the laboratory on September 12, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

TOC by SM 5310B Analysis

The duplicate RPD for Total Organic Carbon is outside control limits due to sample inhomogeneity.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

**Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 09-088

Initiated by: MV

Date Initiated: 9/12/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | Yes | (No) | N/A | Temperature: 18 | |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | Yes | No | (N/A) | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

2.4) #2) MONT-TR on label

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-149

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 15, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: September 15, 2023
Laboratory Reference: 2309-149
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 15, 2023 and received by the laboratory on September 15, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

TOC by SM 5310B Analysis

The continuing calibration verification standard for Inorganic Carbon is outside of the control limits on the high end. This could result in a high sample bias for Inorganic Carbon. Since the samples are all non-detect for Inorganic Carbon, no further action was taken.

Due to limited sample volume, a Spike Blank, Spike Blank Duplicate was used for quality control.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Semivolatiles EPA 8270E/SIM Analysis

Sample SIDL-3-R had one surrogate recovery outside of control limits. This is within allowance of our standard operating procedure as long as the recovery is above 10%.

**Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.**

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2309-213

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on September 21, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 13, 2023
Samples Submitted: September 21, 2023
Laboratory Reference: 2309-213
Project: 14-05806-000

**Case Narrative**

Samples were collected on September 21, 2023 and received by the laboratory on September 21, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Metals EPA 6010D Analysis

The liquid portion of the sample was decanted and only the solid portion was analyzed.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

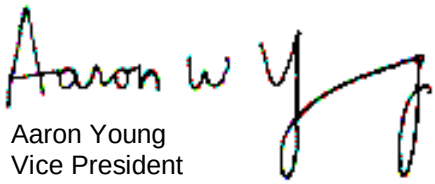
Dear David Baumeister:

Enclosed please find the analytical data for your project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| MONT-3-R | Soil | 23-A018180 | DEM |
| DUPE-2-R | Soil | 23-A018181 | DEM |

Your samples were received on Monday, October 16, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.



The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron Young
Vice President

## Data Validation Memorandum for Sediment Quality Monitoring

HERRERA
Science + Planning + Design

HERRERA
Science + Planning + Design

# Herrera Environmental Consultants, Inc.
# Internal Memorandum

**Date:** July 3, 2024

**To:** Project File 14-05806-000

**From:** Nikki VandePutte

**Subject:** Data Quality Assurance Review of the Redmond Paired Watershed Stormwater Retrofit Effectiveness Sediment Quality Monitoring Data – Water Year 2023

---

## Data Quality Assurance Review

This memorandum presents a review of data quality for 19 sediment samples (including 2 field duplicates) collected for the Redmond Paired Watershed Stormwater Retrofit Effectiveness Study between July 6 and September 21, 2023. OnSite Environmental, Inc., of Redmond, Washington, analyzed the samples for:

- Total organic carbon (TOC) by EPA Method 9060A
- Metals (copper and zinc) by EPA Method 6010D
- Polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270E-SIM
- Phthalates by EPA Method 8270E

AmTest Inc., of Kirkland, Washington, analyzed four of the samples for TOC.

Results of the following samples were validated.

**Table 1. Water Year 2023 Sediment Samples.**

| Date Collected | Lab SDG | Samples Collected | QC Samples Collected |
|---|---|---|---|
| 7/6/2023 | 2307-030 | COLIN-1 | None |
| 7/13/2023 | 2307-092 | MONT-5 | None |
| 7/18/2023 | 2307-119 | TOSH-1 | None |
| 7/25/2023 | 2307-202 | TYLR-1 | None |
| 8/1/2023 | 2308-010 | CTRY-2 | None |
| 8/9/2023 | 2308-116 | MONT-4 | None |
| 8/11/2023 | 2308-142 | SIDL-1 | None |
| 8/16/2023 | 2308-173 | CTRY-1 | None |

| Table 1 (continued). Water Year 2023 Sediment Samples. | | | |
|---|---|---|---|
| **Date Collected** | **Lab SDG** | **Samples Collected** | **QC Samples Collected** |
| 8/18/2023 | 2308-213 | TYLR-2 | None |
| 8/18/2023 | 2308-214 | SIDL-2 | None |
| 8/24/2023 | 2308-278 | TOSH-2 | None |
| 8/28/2023 | 2308-312 | TOSH-4 | None |
| 9/7/2023 | 2309-042 | TOSH-3 | None |
| 9/8/2023 | 2309-055 | MONT-1 | None |
| 9/12/2023 | 2309-088 | MONT-2 | None |
| 9/15/2023 | 2309-149 | SIDL-3, DUPE | 1 field duplicate |
| 9/21/2023 | 2309-213 | MONT-3, DUPE-2 | 1 field duplicate |

The laboratory's performance was reviewed in accordance with quality control (QC) criteria established in the *Redmond Paired Watershed Study Quality Assurance Project Plan* (QAPP; Herrera 2015) by the laboratory, and in the specified methods.

Quality control data summaries submitted by the laboratory were reviewed; raw data were not submitted by the laboratory. Data Quality Assurance Worksheets were completed for each laboratory report. Data qualifiers (flags) were added to the sample results in the laboratory reports. Data validation results are summarized below, followed by definitions of data qualifiers.

## Custody, Preservation, Holding Times, and Completeness – Acceptable with Qualification

The samples were properly preserved, and sample custody was maintained from sample collection to receipt at the laboratory. Samples were analyzed within the required method holding times, with the exceptions noted below. The laboratory reports were complete and contained results for all samples and tests requested on the chain-of-custody (COC) forms.

- Eleven TOC samples were analyzed outside of the QAPP-specified holding time of 14 days. However, eight of these samples were analyzed within the EPA recommended holding time of 28 days. The three samples that were analyzed outside the 28-day holding time (TYLR-2, TOSH-2, and TOSH-4) were qualified as estimated (flagged J).

## Laboratory Reporting Limits – Acceptable with Discussion

The laboratory reporting limits met those established in the QAPP with some exceptions. Reporting limits for PAHs (2 samples) and phthalates (1 sample) were slightly elevated (e.g., 82 versus 70 ug/kg), with some undetected values; however, the increased RLs were very slight and data quality was not affected. No data were qualified based on laboratory reporting limits.

## Method Blank Analysis – Acceptable with Discussion

Method blanks were analyzed at the required frequency. Method blanks did not contain levels of target analytes above the laboratory reporting limits, with the following exception:

- The method blank analyzed for bis(ethyl-hexyl) phthalate (BEHP) with two samples, had a detection above the reporting limit (0.33 mg/kg versus reporting limit of 0.01). BEHP was not detected in the associated samples, so no data were qualified.

## Laboratory Control Sample Analysis – Acceptable

Blank spike/blank spike duplicate (BS/BSD) samples were analyzed with project samples for TOC, PAHs, and phthalates at the required frequency. The percent recovery values for all parameters met the criteria established in the QAPP.

## Surrogate Compound Analysis – Acceptable with Discussion

Surrogates were analyzed with project samples, method blanks, and laboratory duplicates for PAHs and phthalates, as required by the analytical methods. The percent recovery values for all surrogate compounds met the criteria established by the laboratory, with the following exception:

- The percent recovery of one surrogate standard analyzed for sample SIDL-3 was slightly below the criteria (32 percent versus minimum 38 percent). This was within the laboratory's allowance, and no data were qualified.

## Matrix Spike Analysis – Acceptable

Matrix spike/matrix spike duplicate (MS/MSD) samples were analyzed for copper and zinc at the required frequency. The percent recovery values for copper and zinc met the control limits (75 to 125 percent) established in the QAPP.

## Laboratory Duplicate Analysis – Acceptable

Laboratory duplicate samples were analyzed for TOC, copper, and zinc; BS/BSD samples were analyzed for PAHs and phthalates. The relative percent difference (RPD) was calculated for each analyte where both duplicate values were greater than five times the reporting limit (RL). The difference between duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the duplicate. The RPD values or difference values met the control limits established by the QAPP, with the following exception:

- The laboratory duplicate of MONT-2 analyzed for TOC slightly exceeded the QAPP criterion (23 versus ≤20 percent). The laboratory criterion was ≤22 percent, so the result was not qualified for the slight exceedance.

## Field Duplicate Analysis – Acceptable with Qualification

Field duplicates of samples SIDL-3 and MONT-3 were collected and analyzed for all parameters. The RPD was calculated for each analyte where both the values were greater than five times the RL. The difference between the duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the field duplicate. The RPD values or difference values met the control limits established in the QAPP.

# Definition of Data Qualifiers

The following are data qualifier definitions (Table 2 [see Table 8 in Herrera 2015]) applied for this project.

**Table 8. Data Qualifier Definitions.**

| Data Qualifier | Definition |
|---|---|
| J | Value is an estimate based on analytical results |
| R | Value is rejected based on analytical results |
| U | Value is below the reporting limit |
| UJ | Value is below the reporting limit and is an estimate based on analytical results |

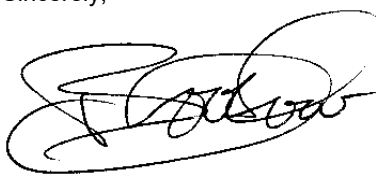
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2210-222



Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on October 21, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 26, 2023
Samples Submitted: October 21, 2022
Laboratory Reference: 2210-222
Project: 14-05806-000

**Case Narrative**

Samples were collected on October 21, 2022 and received by the laboratory on October 21, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Suspended Solids SM 2540D Analysis

The Total Suspended Solids sample MONM-2022 (10-222-08) was analyzed on 10-24-22. The Spike Blank was outside of control limits. There was insufficient sample to reanalysis. The other samples were reanalyzed within holding time.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Attention: BLAIR GOODROW

Dear BLAIR GOODROW:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| SEIMS-20221021 | Water | 22-A018468 | Micro, NUT |
| QA125-20221021 | Water | 22-A018469 | Micro, NUT |
| COUMO-20221021 | Water | 22-A018470 | Micro, NUT |
| COUMI-20221021 | Water | 22-A018471 | Micro, NUT |
| TOSMO-20221021 | Water | 22-A018472 | Micro, NUT |
| TYLMO-20221021 | Water | 22-A018473 | Micro, NUT |
| TYLMI-20221021 | Water | 22-A018474 | Micro, NUT |
| MONMN-20221021 | Water | 22-A018475 | Micro, NUT |
| MONMS-20221021 | Water | 22-A018476 | Micro, NUT |
| MONM-20221021 | Water | 22-A018477 | Micro, NUT |
| TOSMI-20221021 | Water | 22-A018478 | Micro, NUT |
| SEIMN-20221021 | Water | 22-A018479 | Micro, NUT |

Your samples were received on Monday, October 24, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

| Conductivity (µS/cm) | 1408 | 1413 ~~100~~ | 23.6 | |
| DO % Saturation | 100.5 | 100 | 22.9 | |

*Solution has been ordered

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

| ~~Conductivity (µS/cm)~~ | | ~~100~~ | | |
| DO % Saturation | 99.4 | 100 | 22.8 | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 1.2 | 0 | 4.5 | |
| Conductivity (µS/cm) | 1404 | ~~1402~~ ~~100~~ | 22.7 | |
| DO % Saturation | 100.8 | 100 | 21.9 | |

* Solution has been ordered

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

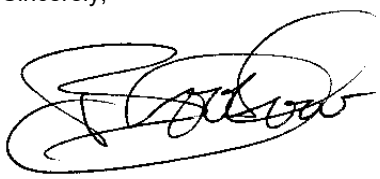
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2210-298



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on October 26, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 26, 2023
Samples Submitted: October 26, 2022
Laboratory Reference: 2210-298
Project: 14-05806-000

**Case Narrative**

Samples were collected on October 26, 2022 and received by the laboratory on October 26, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.
