# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 1405806-000

Initiated by: NB

OnSite Project Number: 11-351

Date Initiated: 11/30/22

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 0.5, 0.1, 0.3, 0.2 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | Yes | (No) | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | Yes | (No) | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

2.4) #5 - All labels read @ 22:40.

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2212-001

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on December 1, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 5, 2023
Samples Submitted: December 1, 2022
Laboratory Reference: 2212-001
Project: 14-05806-000

**Case Narrative**

Samples were collected on November 30, 2022 and received by the laboratory on December 1, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

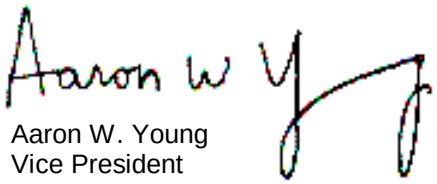
Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| TYLMI-20221130 | Water | 22-A020760 | Micro, NUT |
| SEIMN-20221130 | Water | 22-A020761 | Micro, NUT |
| COLM-20221130 | Water | 22-A020762 | Micro, NUT |

Your samples were received on Thursday, December 1, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.



The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-058006-000

OnSite Project Number: 12-001

Initiated by: NB

Date Initiated: 12/1/22

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 0 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | | |
|---|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

3.7) E. Coli will expire

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 2.3 | 0 | 18.7 | |
| Conductivity (µS/cm) | 93.6 | 100 | 18.1 | |
| DO % Saturation | 101.0 | 100 | 18.1 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| DO % Saturation | 100.6 | 100 | 20.3 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2301-049

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on January 9, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: March 29, 2023
Samples Submitted: January 9, 2023
Laboratory Reference: 2301-049
Project: 14-05806-000

**Case Narrative**

Samples were collected on January 8, 2023and received by the laboratory on January 9, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

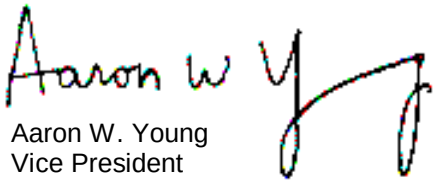
Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230108 | Water | 23-A000308 | Micro, NUT |
| COUMI-20230108 | Water | 23-A000309 | Micro, NUT |
| TOSMO-20230108 | Water | 23-A000310 | Micro, NUT |
| TYLMO-20230108 | Water | 23-A000311 | Micro, NUT |
| TYLMI-20230108 | Water | 23-A000312 | Micro, NUT |
| MONMN-20230108 | Water | 23-A000313 | Micro, NUT |
| MONMS-20230108 | Water | 23-A000314 | Micro, NUT |
| MONM-20230108 | Water | 23-A000315 | Micro, NUT |
| TOSMI-20230108 | Water | 23-A000316 | Micro, NUT |
| SEIMN-20230108 | Water | 23-A000317 | Micro, NUT |
| COLM-20230108 | Water | 23-A000318 | Micro, NUT |
| SEIMS-20230108 | Water | 23-A000319 | Micro, NUT |
| QA128-20230108 | Water | 23-A000320 | Micro, NUT |

Your samples were received on Monday, January 9, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.



The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

## BATCH MAKEUP

***Contract:*** 5234

***Samples:***

| | |
|---|---|
| L38664-5 | COUMO-20230108 |
| L38664-6 | COUMI-20230108 |
| L38664-7 | TOSMO-20230108 |
| L38664-8 | TOSMI-20230108 |

***Blank:*** WG84161-101

***Reference or Spike:*** WG84161-102

***Duplicate:***

**Comments:**

1. Data are considered final.
2. Data are not blank corrected. Blank data should be taken into consideration when evaluating sample data.
3. Blank data should be evaluated against specifications using the same blank sample size as the size of the client samples.
4. Percent recovery of labeled compound d5-6PPD-Quinone in the Lab Blank (SGS AXYS ID: WG84161-101) was below the method nominal limit and was flagged with a ‘V’. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only. Where the percent recovery for a labeled compound fell below 10% but above 1% the corresponding analyte was reported in a ‘concentration is estimated’ capacity and flagged with an 'H'.

This page is part of a total report that contains information necessary for accreditation compliance.
This test is not NELAP accredited. Sample results relate only to the sample tested.

| LABELED COMPOUND | LAB FLAG [1] | SPIKE CONC. | CONC. FOUND | R(%) [2] | RETENTION TIME |
|---|---|---|---|---|---|
| **d5-6PPD-Quinone** | V | 49.2 | 1.43 | 2.91 | 6:24 |

(1) Where applicable, custom lab flags have been used on this report; V = surrogate recovery is not within method/contract control limits.
(2) R(%) = percent recovery.

These data are validated and reported as accurate and in accord with SGS AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2301-084

Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on January 12, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: March 29, 2023
Samples Submitted: January 12, 2023
Laboratory Reference: 2301-084
Project: 14-05806-000

**Case Narrative**

Samples were collected on January 12, 2023 and received by the laboratory on January 12, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Attention: BLAIR GOODROW

Dear BLAIR GOODROW:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230112 | Water | 23-A000556 | Micro, NUT |
| COUMI-20230112 | Water | 23-A000557 | Micro, NUT |
| TOSMO-20230112 | Water | 23-A000558 | Micro, NUT |
| TYLMO-20230112 | Water | 23-A000559 | Micro, NUT |
| TYLMI-20230112 | Water | 23-A000560 | Micro, NUT |
| MONMN-20230112 | Water | 23-A000561 | Micro, NUT |
| MONMS-20230112 | Water | 23-A000562 | Micro, NUT |
| MONM-20230112 | Water | 23-A000563 | Micro, NUT |
| TOSMI-20230112 | Water | 23-A000564 | Micro, NUT |
| SEIMN-20230112 | Water | 23-A000565 | Micro, NUT |
| COLM-20221122 | Water | 23-A000566 | Micro, NUT |
| SEIMS-20221122 | Water | 23-A000567 | Micro, NUT |
| QA129-20221122 | Water | 23-A000568 | Micro, NUT |

Your samples were received on Thursday, January 12, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

***Blank:*** WG84161-101

***Reference or Spike:*** WG84161-102

***Duplicate:***

**Comments:**

1. Data are considered final.
2. Data are not blank corrected. Blank data should be taken into consideration when evaluating sample data.
3. Blank data should be evaluated against specifications using the same blank sample size as the size of the client samples.
4. Percent recovery of labeled compound d5-6PPD-Quinone in the Lab Blank (SGS AXYS ID: WG84161-101) was below the method nominal limit and was flagged with a ‘V’. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only. Where the percent recovery for a labeled compound fell below 10% but above 1% the corresponding analyte was reported in a ‘concentration is estimated’ capacity and flagged with an 'H'.

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | D. Garcia |
| Meter: | Pro DSS #2 |
| Date/Time: | 1/11/25 17:15 |
| Barometric Pressure Start of Day: | mmHg: 760.9 Time: 17:15 |
| Barometric Pressure End of Day: | mmHg: 761.2 Time: 15:05 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 3.0 | 0 | 22.4 | |
| Conductivity (µS/cm) | 994 | 1,000 | 24.4 | |
| Conductivity (µS/cm) | 97 | 100 | 24.0 | |
| DO % Saturation | 99.7 | 100 | 22.7 | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 2.0 | 0 | 21.7 | |
| Conductivity (µS/cm) | 101 | 100 | 22.0 | |
| DO % Saturation | 103% | 100 | 20.9 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

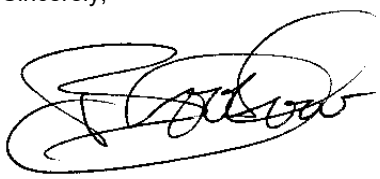
Laboratory Reference No. 2301-173



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on January 20, 2023

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: March 29, 2023
Samples Submitted: January 20, 2023
Laboratory Reference: 2301-173
Project: 14-05806-000

**Case Narrative**

Samples were collected on January 20, 2023 and received by the laboratory on January 20, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Suspended Solids SM 2540D Analysis

The sample and sample duplicate RPD was outside the control limit. The Spike Blank and Spike Blank Duplicate RPD passed. Both Duplicates are reported.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20220120 | Water | 23-A001180 | Micro, NUT |
| COUMI-20220120 | Water | 23-A001181 | Micro, NUT |
| TOSMO-20220120 | Water | 23-A001182 | Micro, NUT |
| TYLMO-20220120 | Water | 23-A001183 | Micro, NUT |
| TYLMI-20220120 | Water | 23-A001184 | Micro, NUT |
| MONMN-20220120 | Water | 23-A001185 | Micro, NUT |
| MONMS-20220120 | Water | 23-A001186 | Micro, NUT |
| MONM-20220120 | Water | 23-A001187 | Micro, NUT |
| TOSMI-20220120 | Water | 23-A001188 | Micro, NUT |
| SEIMS-20220120 | Water | 23-A001189 | Micro, NUT |
| COLM-20220120 | Water | 23-A001190 | Micro, NUT |
| SEIMN-20220120 | Water | 23-A001191 | Micro, NUT |
| QA130-20220120 | Water | 23-A001192 | Micro, NUT |

Your samples were received on Friday, January 20, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

|---|---|
| ***Batch ID:*** WG84161 | ***Date:*** 28-Mar-2023 |
| ***Analysis Type:*** Antiozonants | ***Matrix Type:*** Aqueous |

## BATCH MAKEUP

***Contract:*** 5234

***Samples:***

| | |
|---|---|
| L38809-1 | COUMO-20230120 |
| L38809-2 | COUMI-20230120 |
| L38809-3 | TOSMO-20230120 |
| L38809-4 | TOSMI-20230120 |
| L38809-5 | QA130B-20230120 |

***Blank:*** WG84161-101

***Reference or Spike:*** WG84161-102

***Duplicate:***

**Comments:**

1. Data are considered final.
2. Data are not blank corrected. Blank data should be taken into consideration when evaluating sample data.
3. Blank data should be evaluated against specifications using the same blank sample size as the size of the client samples.
4. Percent recovery of labeled compound d5-6PPD-Quinone in the Lab Blank (SGS AXYS ID: WG84161-101) was below the method nominal limit and was flagged with a ‘V’. As the isotope dilution method of quantification produces data that are recovery corrected, the variances from the method acceptance criteria are deemed not to affect the quantification of the analytes. Percent labeled compound recoveries are used as a general method performance indicator only. Where the percent recovery for a labeled compound fell below 10% but above 1% the corresponding analyte was reported in a ‘concentration is estimated’ capacity and flagged with an 'H'.

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | D Garcia |
| Meter: | For DSI #1 |
| Date/Time: | 1/19/23 17:00 |
| Barometric Pressure Start of Day: | mmHg: 778.1 Time: 17:00 |
| Barometric Pressure End of Day: | mmHg: 779.2 Time: 11:58 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 2.0 | 0 | 21.7 | |
| Conductivity (µS/cm) | 1003.2 | 1,000 | 22.0 | |
| Conductivity (µS/cm) | 104 | 100 | 22.1 | |
| DO % Saturation | 102 | 100 | 22.1 | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | | 0 | | |
| Conductivity (µS/cm) | | 100 | | |
| DO % Saturation | | 100 | | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

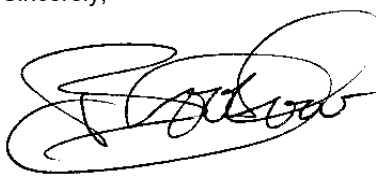
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2302-068



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on February 7, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: February 7, 2023
Laboratory Reference: 2302-068
Project: 14-05806-000

**Case Narrative**

Samples were collected on February 7, 2023 and received by the laboratory on February 7, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

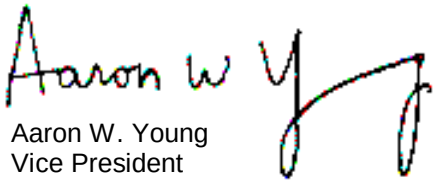
Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230207 | Water | 23-A002313 | Micro, NUT |
| COUMI-20230207 | Water | 23-A002314 | Micro, NUT |
| TOSMO-20230207 | Water | 23-A002315 | Micro, NUT |
| TYLMO-20230207 | Water | 23-A002316 | Micro, NUT |
| TYLMI-20230207 | Water | 23-A002317 | Micro, NUT |
| MONMN-20230207 | Water | 23-A002318 | Micro, NUT |
| MONMS-20230207 | Water | 23-A002319 | Micro, NUT |
| MONM-20230207 | Water | 23-A002320 | Micro, NUT |
| TOSMI-20230207 | Water | 23-A002321 | Micro, NUT |
| SEIMN-20230207 | Water | 23-A002322 | Micro, NUT |
| COLM-20230207 | Water | 23-A002323 | Micro, NUT |
| SEIMS-20230207 | Water | 23-A002324 | Micro, NUT |
| QA131-20230207 | Water | 23-A002325 | Micro, NUT |

Your samples were received on Tuesday, February 7, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.



The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | D. Garcia |
| Meter: | Pro DSS #2 |
| Date/Time: | 2/6/23 15:00 pm |
| Barometric Pressure Start of Day: | mmHg: 773.2 Time: 15:15 |
| Barometric Pressure End of Day: | mmHg: 766.9 Time: 14:30 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 2.2 | 0 | 18.5 | |
| Conductivity (µS/cm) | 959 | 1,000 | 21.9 | |
| Conductivity (µS/cm) | 98 | 100 | 22.4 | |
| DO % Saturation | 104.2 | 100 | 21.2 | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 3.5 | 0 | 21.3 | |
| Conductivity (µS/cm) | 97 | 100 | 22.3 | |
| DO % Saturation | 102.2 | 100 | 21.2 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

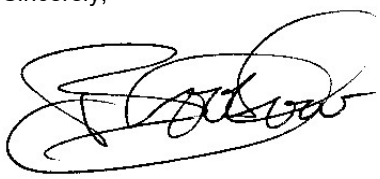
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2303-020



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on March 2, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: May 30, 2023
Samples Submitted: March 2, 2023
Laboratory Reference: 2303-020
Project: 14-05806-000

**Case Narrative**

Samples were collected on March 2, 2023 and received by the laboratory on March 2, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230302 | Water | 23-A003833 | Micro, NUT |
| COUMI-20230302 | Water | 23-A003834 | Micro, NUT |
| TOSMO-20230302 | Water | 23-A003835 | Micro, NUT |
| TYLMO-20230302 | Water | 23-A003836 | Micro, NUT |
| TYLMI-20230302 | Water | 23-A003837 | Micro, NUT |
| MONMN-20230302 | Water | 23-A003838 | Micro, NUT |
| MONMS-20230302 | Water | 23-A003839 | Micro, NUT |
| MONM-20230302 | Water | 23-A003840 | Micro, NUT |
| TOSMI-20230302 | Water | 23-A003841 | Micro, NUT |
| SEIMN-20230302 | Water | 23-A003842 | Micro, NUT |
| COLM-20230302 | Water | 23-A003843 | Micro, NUT |
| SEIMS-20230302 | Water | 23-A003844 | Micro, NUT |
| QA132-20230302 | Water | 23-A003845 | Micro, NUT |

Your samples were received on Thursday, March 2, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 03-020

Initiated by: MV

Date Initiated: 3/2/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 4,3,3,3 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

3.7) Colifrm will expire < 24 hrs

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

# METER CALIBRATION LOG - Redmond Paired Watershed Study

| | |
|---|---|
| Project Number: | 14-05806-000 |
| Personnel Performing Calibration: | D. Garcia |
| Meter: | Pro DSS #2 |
| Date/Time: | 2/6/23 15:00 pm |
| Barometric Pressure Start of Day: | mmHg: 773.2 Time: 15:15 |
| Barometric Pressure End of Day: | mmHg: 766.9 Time: 14:30 |

| PRE Field Run CALIBRATION | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 2.2 | 0 | 18.5 | |
| Conductivity (µS/cm) | 959 | 1,000 | 21.9 | |
| Conductivity (µS/cm) | 98 | 100 | 22.4 | |
| DO % Saturation | 104.2 | 100 | 21.2 | |

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 3.5 | 0 | 21.3 | |
| Conductivity (µS/cm) | 97 | 100 | 22.3 | |
| DO % Saturation | 102.2 | 100 | 21.2 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

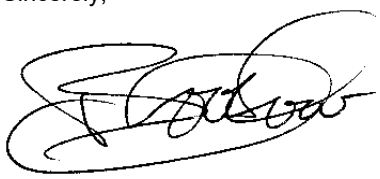
Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2303-124



Dear John:

Enclosed are the analytical results and associated quality control data for samples submitted on March 13, 2023.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

Blair Goodrow
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: March 27, 2023
Samples Submitted: March 13, 2023
Laboratory Reference: 2303-124
Project: 14-05806-000

**Case Narrative**

Samples were collected on March 13, 2023 and received by the laboratory on March 13, 2023. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

This report pertains to the samples analyzed in accordance with the chain of custody,
and is intended only for the use of the individual or company to whom it is addressed.

and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

**Data Qualifiers and Abbreviations**

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.

X2 - Sample extract treated with a silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Y1 - Negative effects of the matrix from this sample on the instrument caused values for this analyte in the bracketing continuing calibration verification standard (CCVs) to be outside of 20% acceptance criteria. Because of this, quantitation limits and sample concentrations should be considered estimates.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

| CLIENT ID | MATRIX | AMTEST ID | TEST |
|---|---|---|---|
| COUMO-20230313 | Water | 23-A004502 | Micro, NUT |
| COUMI-20230313 | Water | 23-A004503 | Micro, NUT |
| TOSMO-20230313 | Water | 23-A004504 | Micro, NUT |
| TYLMO-20230313 | Water | 23-A004505 | Micro, NUT |
| TYLMI-20230313 | Water | 23-A004506 | Micro, NUT |
| MONMN-20230313 | Water | 23-A004507 | Micro, NUT |
| MONMS-20230313 | Water | 23-A004508 | Micro, NUT |
| MONM-20230313 | Water | 23-A004509 | Micro, NUT |
| TOSMI-20230313 | Water | 23-A004510 | Micro, NUT |
| SEIMN-20230313 | Water | 23-A004511 | Micro, NUT |
| COLM-20230313 | Water | 23-A004512 | Micro, NUT |
| SEIMS-20230313 | Water | 23-A004513 | Micro, NUT |
| QA133-20230313 | Water | 23-A004514 | Micro, NUT |

Your samples were received on Monday, March 13, 2023. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

# Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 03-124

Initiated by: MV

Date Initiated: 3/13/23

## 1.0 Cooler Verification

| | | | | | |
|---|---|---|---|---|---|
| 1.1 Were there custody seals on the outside of the cooler? | Yes | (No) | N/A | 1 2 3 4 | |
| 1.2 Were the custody seals intact? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.3 Were the custody seals signed and dated by last custodian? | Yes | No | (N/A) | 1 2 3 4 | |
| 1.4 Were the samples delivered on ice or blue ice? | (Yes) | No | N/A | 1 2 3 4 | |
| 1.5 Were samples received between 0-6 degrees Celsius? | (Yes) | No | N/A | Temperature: | 3.1.1 |
| 1.6 Have shipping bills (if any) been attached to the back of this form? | Yes | (N/A) | | | |
| 1.7 How were the samples delivered? | (Client) | Courier | UPS/FedEx | OSE Pickup | Other |

## 2.0 Chain of Custody Verification

| | | | |
|---|---|---|---|
| 2.1 Was a Chain of Custody submitted with the samples? | (Yes) | No | 1 2 3 4 |
| 2.2 Was the COC legible and written in permanent ink? | (Yes) | No | 1 2 3 4 |
| 2.3 Have samples been relinquished and accepted by each custodian? | (Yes) | No | 1 2 3 4 |
| 2.4 Did the sample labels (ID, date, time, preservative) agree with COC? | (Yes) | No | 1 2 3 4 |
| 2.5 Were all of the samples listed on the COC submitted? | (Yes) | No | 1 2 3 4 |
| 2.6 Were any of the samples submitted omitted from the COC? | Yes | (No) | 1 2 3 4 |

## 3.0 Sample Verification

| | | | | |
|---|---|---|---|---|
| 3.1 Were any sample containers broken or compromised? | Yes | (No) | | 1 2 3 4 |
| 3.2 Were any sample labels missing or illegible? | Yes | (No) | | 1 2 3 4 |
| 3.3 Have the correct containers been used for each analysis requested? | (Yes) | No | | 1 2 3 4 |
| 3.4 Have the samples been correctly preserved? | (Yes) | No | N/A | 1 2 3 4 |
| 3.5 Are volatiles samples free from headspace and bubbles greater than 6mm? | Yes | No | (N/A) | 1 2 3 4 |
| 3.6 Is there sufficient sample submitted to perform requested analyses? | (Yes) | No | | 1 2 3 4 |
| 3.7 Have any holding times already expired or will expire in 24 hours? | (Yes) | No | | 1 2 3 4 |
| 3.8 Was method 5035A used? | Yes | No | (N/A) | 1 2 3 4 |
| 3.9 If 5035A was used, which sampling option was used (#1, 2, or 3). | # | | (N/A) | 1 2 3 4 |

**Explain any discrepancies:**

3.7) Coliform will expire <24hrs

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

| POST Field Run CHECK | Meter Reading | Buffer / Cal Std | Temp °C | Comments |
|---|---|---|---|---|
| Conductivity (µS/cm) | 0.6 | 0 | 20.3 | |
| Conductivity (µS/cm) | 96.6 | 100 | 20.5 | |
| DO % Saturation | 93.1 | 100 | 19.8 | |

**Calibration Procedures:**

**Rinse Multimeter Sonde Between Each Operation**

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

**Conductivity Calibration Notes:**

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

**Dissolved Oxygen Calibration Notes:**

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

# METER CALIBRATION LOG - Redmond Paired Watershed Study

**Base Flow or Storm Event?** Storm **Field filtered 5 minutes later:** Y N
(Must filter within 15 minutes of collection)

**SITE ID:** TYLMO

**Project Number:** 14-05806-000

**Project Name:** Redmond Paired Watershed Study

**Current Weather and Temp:** Heavy rain, 42° F

## Water Quality Sampling

**Sample ID:** TYLMO-20230813

| Parameter | Bottle Type | Bottle Volume | # Bottles | Preservative | Duplicated? |
|---|---|---|---|---|---|
| TSS and Turbidity | HDPE | 1L | 1 | NA | No |
| DOC * | HDPE | 250 ml | 1 | HCL | |
| Fecal Col. Bact. | HDPE | 250 ml | 1 | EDTA | |
| T. Phosphorous | HDPE | 250 ml | 1 | $H_2SO_4$ | |
| T. Nitrogen | HDPE | 250 ml | 1 | $H_2SO_4$ | |
| Diss. Cu and Zn * | HDPE | 250 ml | 1 | HNO3 | |
| Hardness, Total Cu and Zn | HDPE | 500 ml | 1 | $HNO_3$ | |
| 6PPD-q | Amber Glass | 500mL | 2 | NA | |
| PAH's | Amber Glass | 1L | 2 | NA | |

* - field filtered with Nalgene 250 ml SFCA 0.45 µm filter and vacuum hand pump

| | |
|---|---|
| Duplicate sample ID: | |
| Filter blank sample ID: | |
| Transfer blank sample ID: | |

**Visual and Olfactory Conditions:**

| | |
|---|---|
| Clarity: | Turbid |
| Color: | Brown |
| Odor: | None |
| Sheen: | None |
| Floatables: | None |

**LABORATORY DELIVERY**

**Date:** **Time:**

## Quality Assurance

**Checked By:** **Signature:**

**Date Checked:** **Time:**

**Data Entered into Database?** YES NO **initials:**

**Date Entered:** **Time:**

**Notes:**

## Field Meter Calibration

**Check which field meter was used and complete the meter calibration form**

- YSI Pro Plus (15D100020)
- YSI Pro DSS 1
- YSI Pro DSS 2

## Stream Stage Measurement

**Indicate reference point for measurement (to nearest 100th of a foot)**

**Stream Stage (ft):** 2.60

**Reference Point (description):**

## Water Quality Measurments

**Temperature (°C)** 6.4

**Specific Conductivity (µs/cm)** 65.2

**Dissolved Oxygen (mg/L)** 11.88

**Dissolved Oxygen (%)** 96.5

# FIELD SAMPLING SHEET - Redmond Paired Watershed Study

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported
