WATER QUALITY PROGRAM

Dear Ms. Lubliner:

SUBJECT: Quarterly Report for SAM Bioretention Hydrologic Performance Study Phase II, C1800060 D.I.I.

The City of Olympia and the consultant team met recently to discuss administrative support of the study and technical issues associated with facility design and site selection. Specifically, we have:

- Established subconsultant budgets and agreements with Taylor Aquatic Services, Associated Earth Sciences, Aspect Consulting and Raedeke Associates.
- Worked with the City of Bellingham to secure monitoring equipment purchased during Phase I of the study.
- Developed criteria for stormwater facility selection.
- Contacted numerous property owners and design consultants regarding potential suitable facilities and level of interest in participating in the study.

We anticipate submitting a modest invoice in the near future.

As we work through the initial steps in grant administration, please do not hesitate to let me know how I can be more helpful. Please contact me at ahaub@ci.olympia.wa.us or at (360) 753-8475. Thank you.

Sincerely,

ANDY HAUB, P.E.
Water Resources Director
