

Puget Lowland Ecoregion Streams Status & Trends

Brandi Lubliner, SAM Coordinator; Rich Sheibley, USGS; Curtis DeGasperi, King County; Chad Larson, Ecology; Leska Fore, Puget Sound Partnership

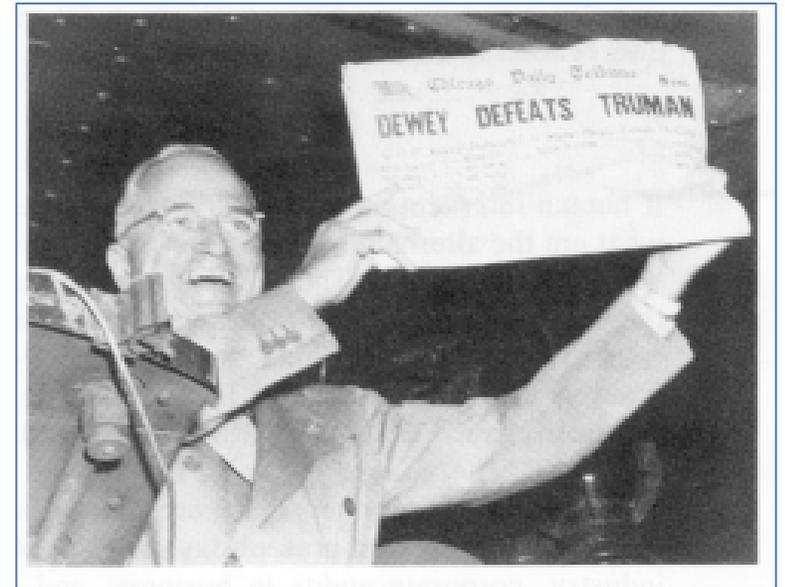

Study questions:

- **Q1:** What percent of streams meet biological, water, and sediment quality standards for beneficial uses within and outside urban growth areas (UGAs)?
- **Q2 & Q3:** What natural and human variables correlate with the status of streams within and outside the UGA?
- **Q4:** How do SAM results compare to other monitoring programs in Puget Sound?
- **Q5:** What parameters would be carried forward for trend assessment of SAM stream monitoring in the future, and at what timing and frequency?

Sampling design “survey-based”

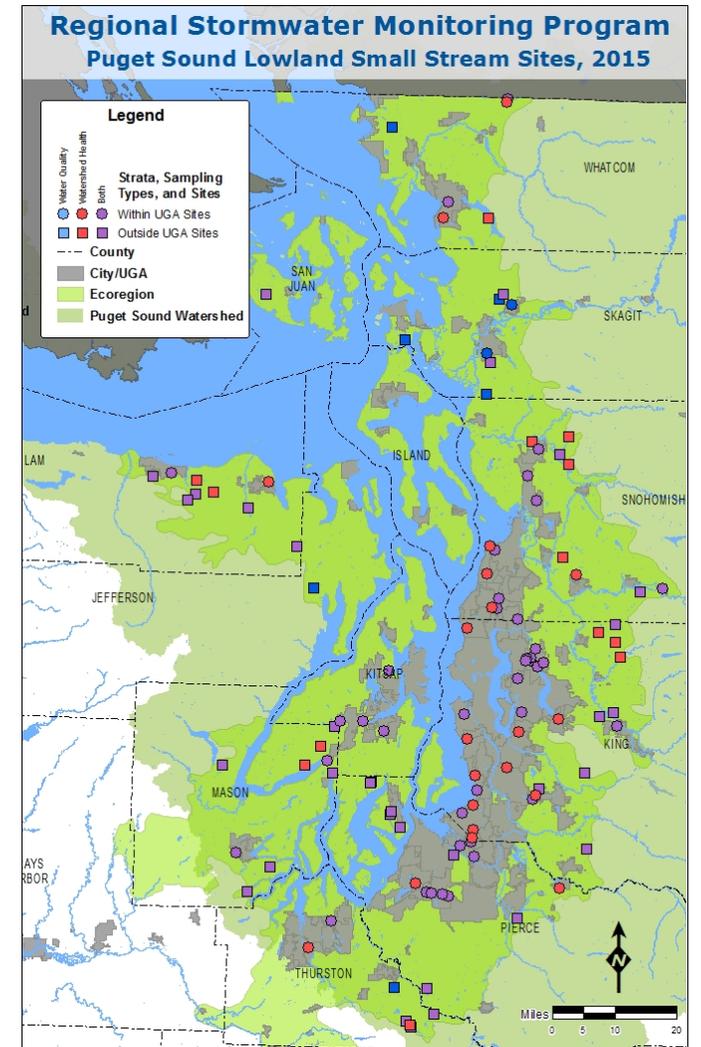

- Analogous to polling methods
- A complete census is not possible
- Survey-based sampling is efficient
- Survey-based sampling provides confidence bounds on results

We avoided this:

Sampled small Puget Lowland Streams within and outside urban growth areas (UGAs) for:

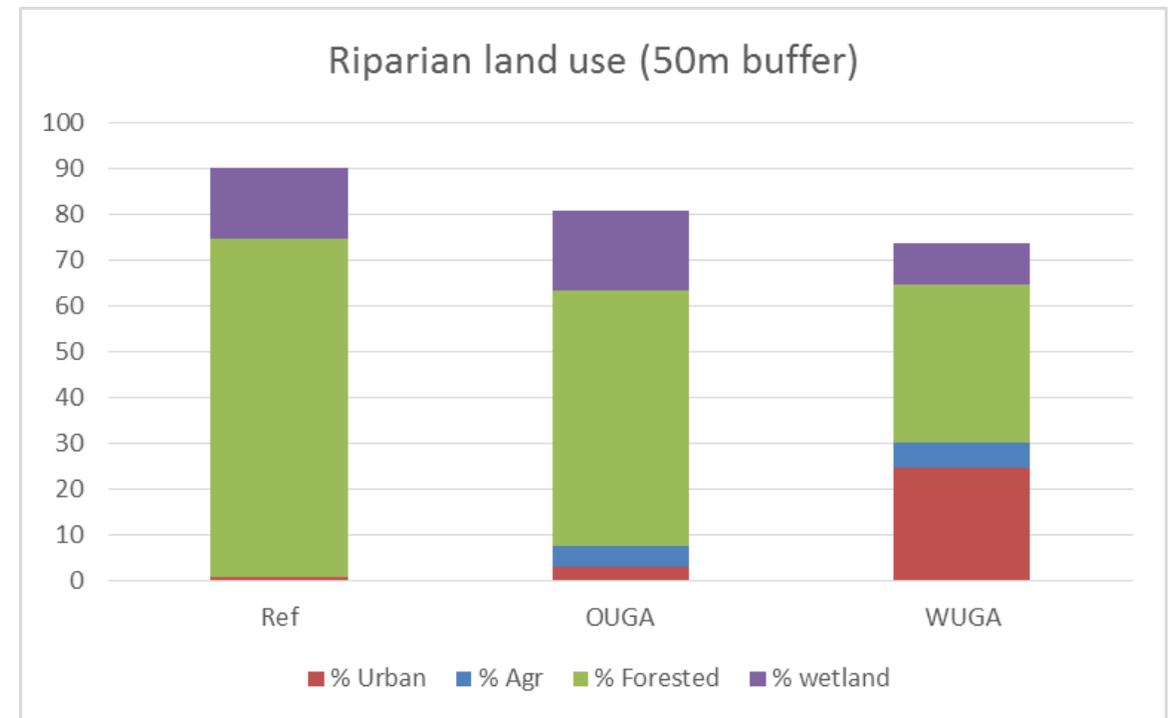

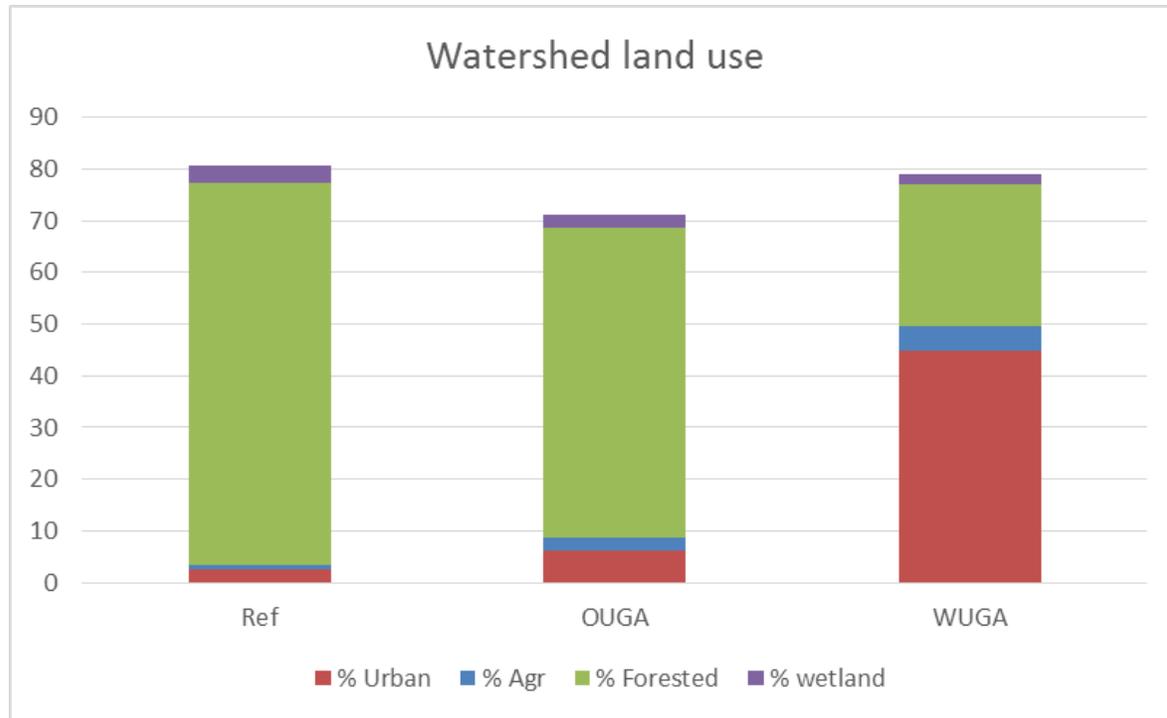

- Monthly water quality Jan-Dec 2015
 - Conventional parameters, metals, PAHs, stream flow
- Summer Watershed Health Monitoring
 - Water quality (conventional parameters)
 - Benthic macroinvertebrates
 - Periphyton
 - Sediment chemistry (TOC, metals, phthalates, PAHs, PCBs, PBDEs, common pesticides)

Included watershed and riparian GIS analysis

- Leveraged USGS NAWQA expertise (and USGS \$) to derive land cover and other landscape parameters for all SAM PLES sites and 16 least-disturbed reference sites
- Why? Because local riparian and upstream land cover shown to be important factor for biological communities

Q1: Biological Status

- Biological condition was generally worse in small streams within UGAs compared to streams outside UGAs

Benthic Index of Biotic Integrity

Trophic Diatom Index

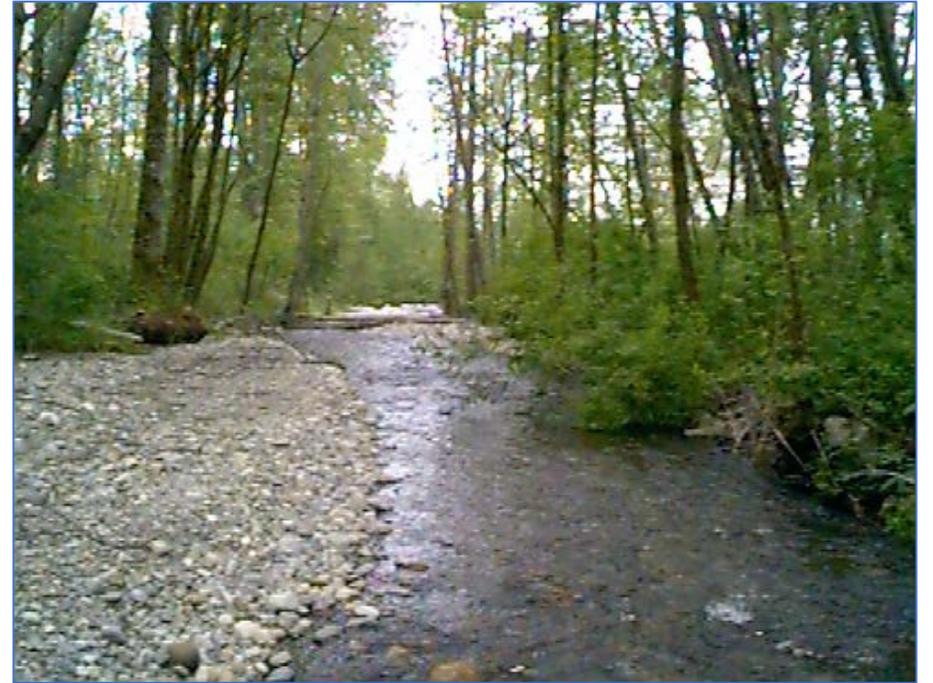

Q1: Comparison to water quality standards

- Higher frequency of exceedance of fecal coliform standard at sites within UGAs
- Similar frequency of exceedance of temperature, pH, and dissolved oxygen standards at sites within and outside of UGAs
- Measured metals concentrations did not typically exceed relevant acute or chronic standards for the protection of aquatic life.

Q1: Comparison to sediment quality standards

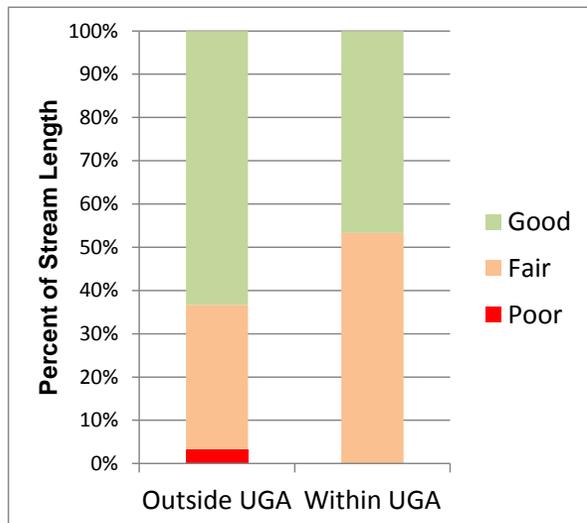

- Measured sediment contaminant concentrations did not typically exceed sediment quality standards within or outside UGAs

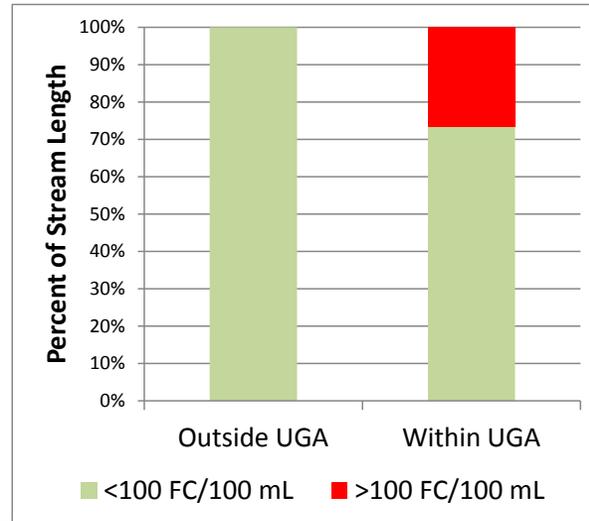

Q1: Water Quality Status

- Status based on WQI and temperature similar inside and outside UGAs
- Greater proportion of stream length within UGAs in poor condition based on Fecal Coliform bacteria and Total Phosphorus

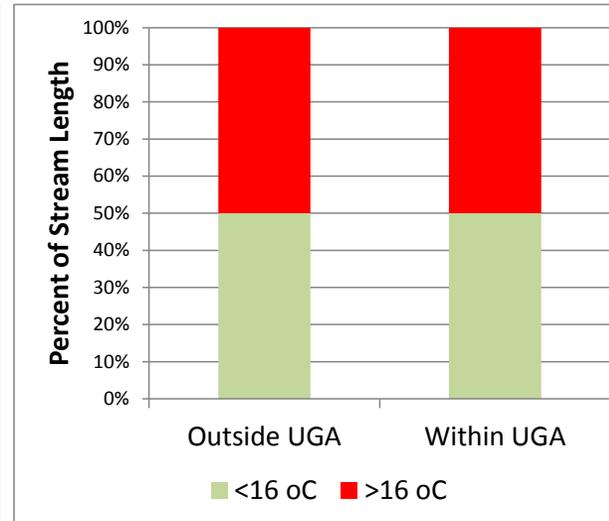

Annual Water Quality Index

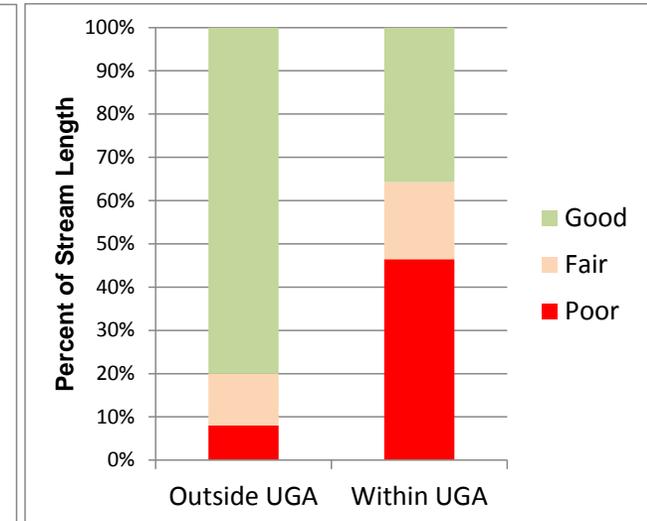

Fecal Coliform Bacteria

Temperature

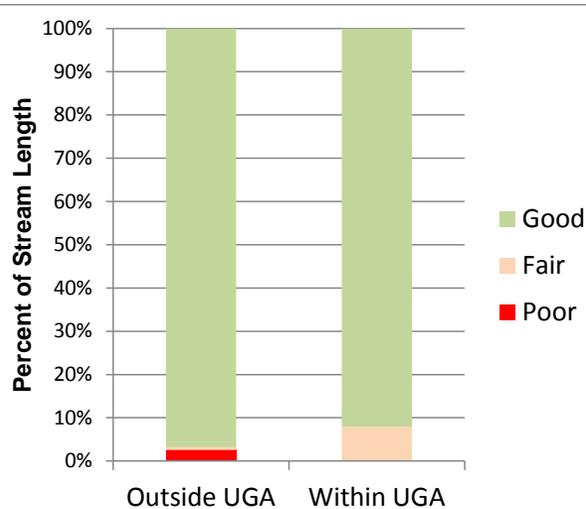

Total Phosphorus

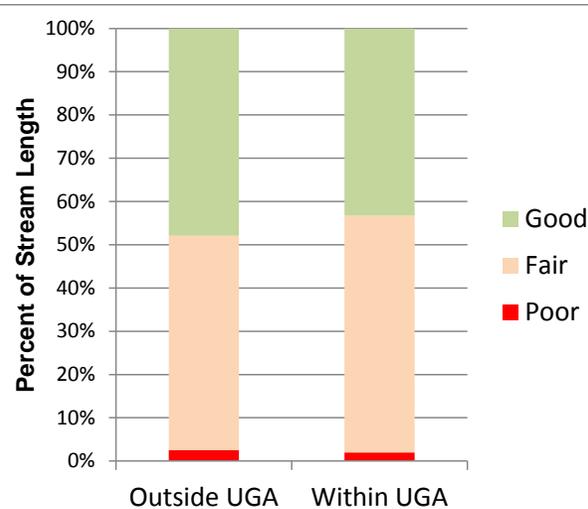

Q1: Sediment Quality Status

- Highest concentrations measured typically occurred within UGAs
- Zinc concentrations distinctly elevated within UGAs

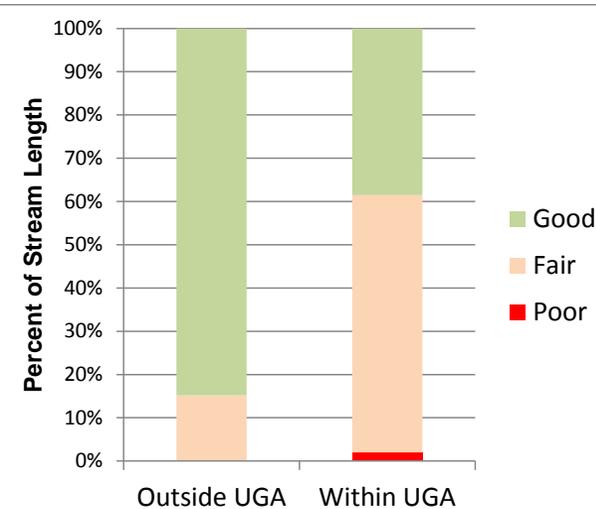

Cadmium

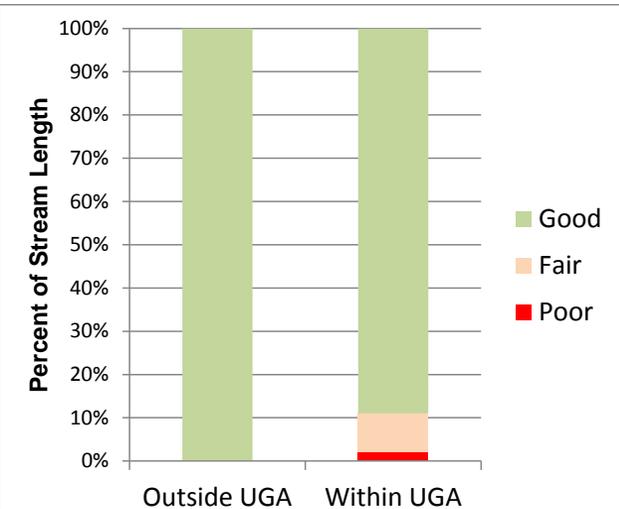

Chromium

Zinc

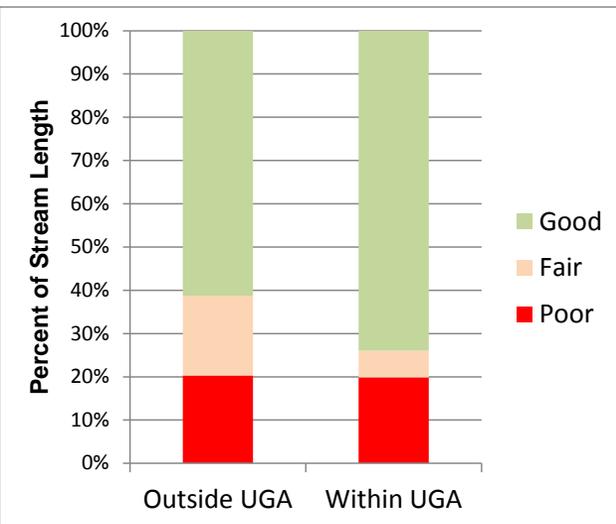

Total PAH

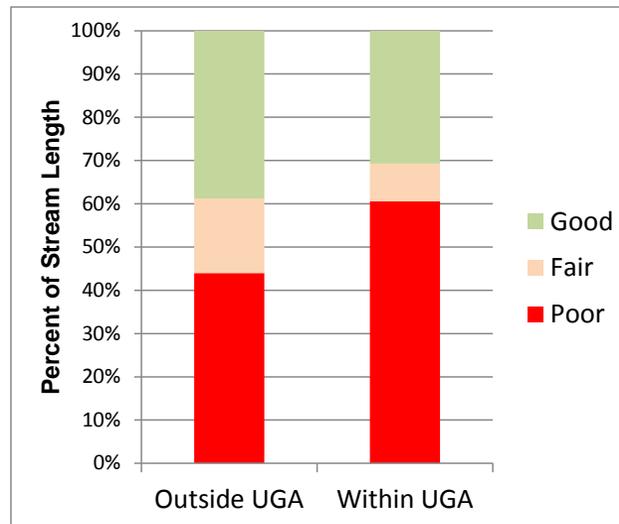

Q1: Habitat Status

- Habitat in poor condition similar within and outside UGAs except for wood volume and pool area
- Habitat poor + fair condition similar within and outside UGAs except for stream substrate status

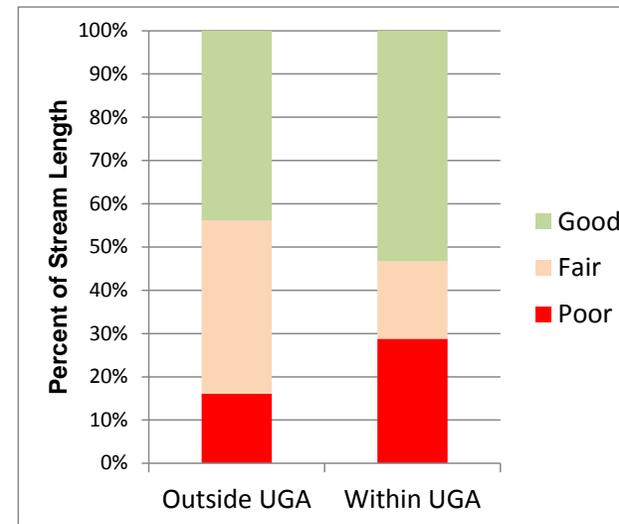

Riparian Condition

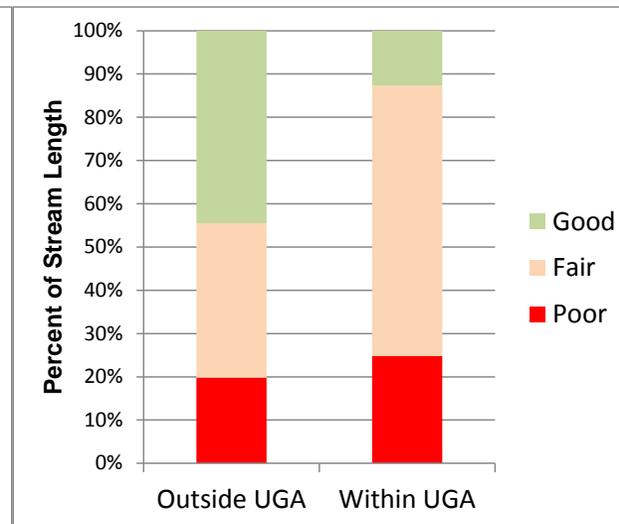

Large Wood Volume

Residual Pool Area

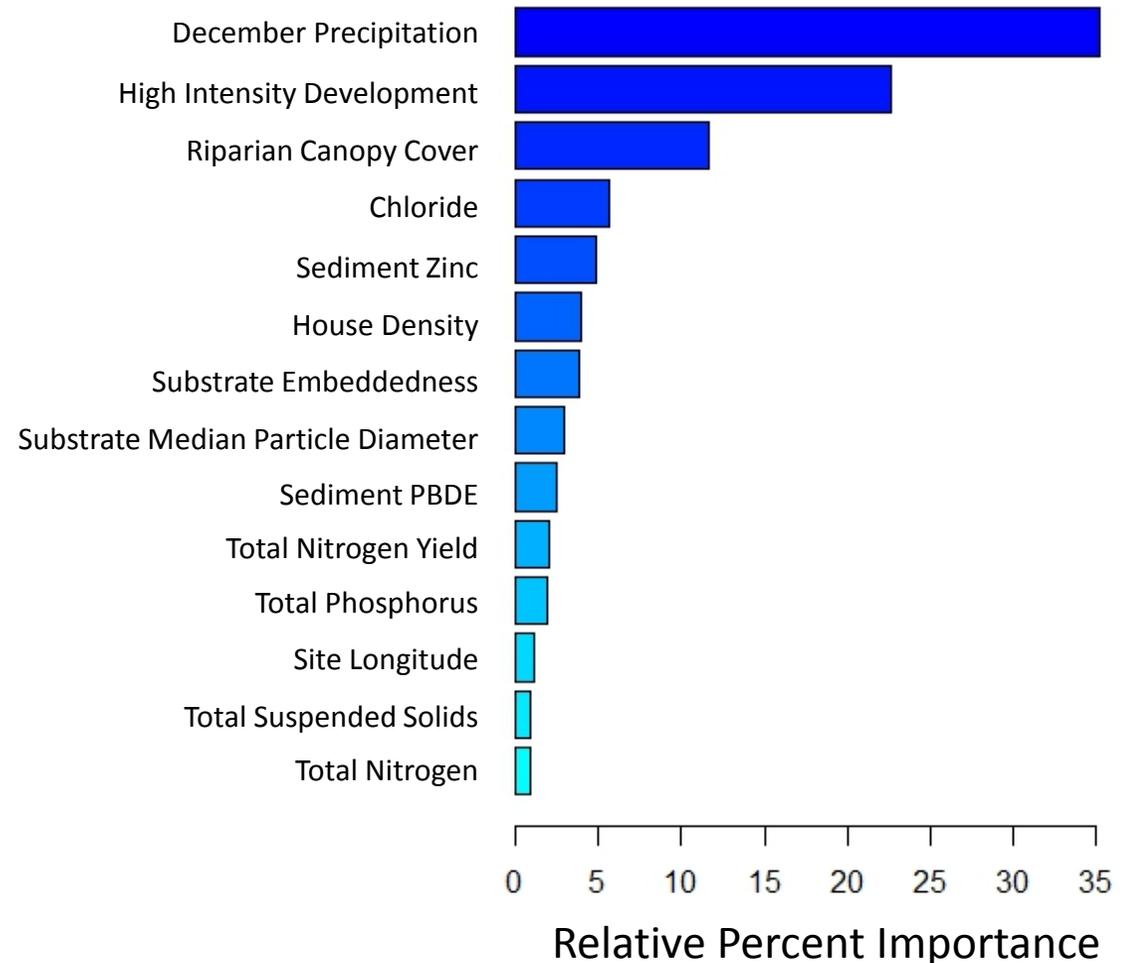

Median Particle Size (D50)

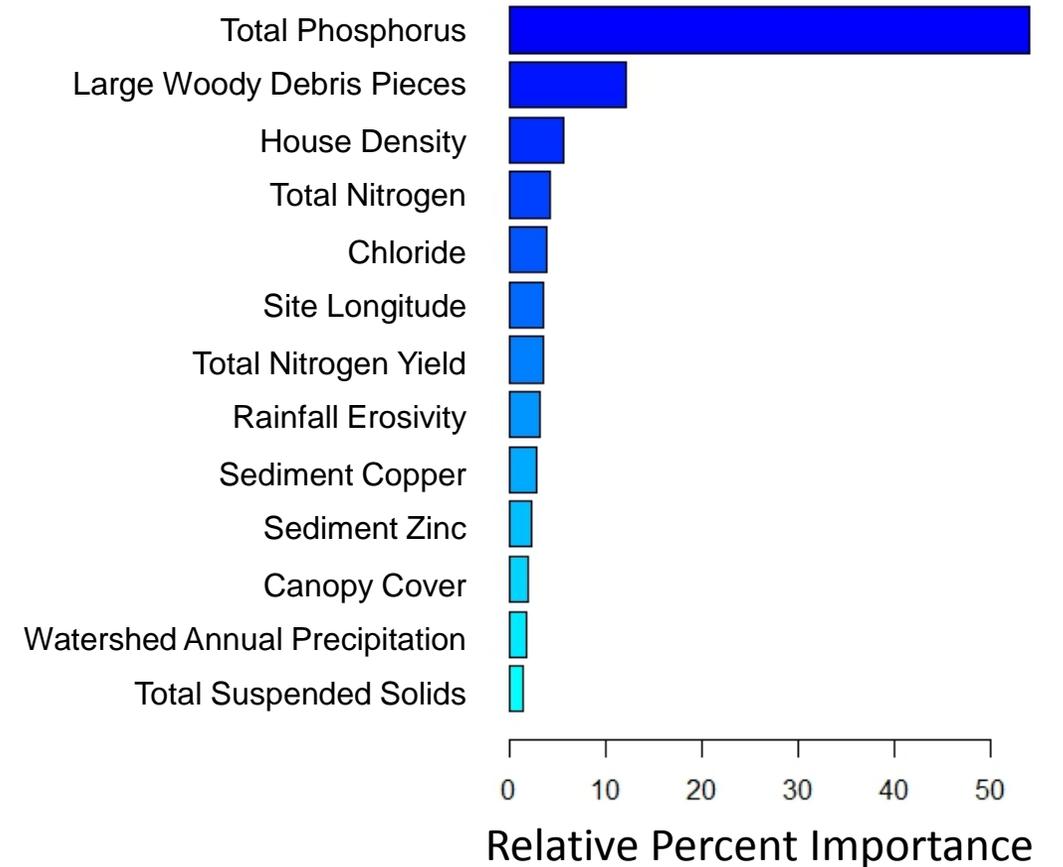

Q2/Q3: Natural and human variables that correlate with BIBI scores

- Natural variables
 - Mean December precipitation
 - Longitude
- Human variables
 - High Intensity Development
 - Riparian Canopy Cover
 - Chloride in water
 - Zinc in sediment
 - House density
 - Stream embeddedness
 - Etc

Q2/Q3: Natural and human variables that correlate with Trophic Diatom Index

- Natural variables
 - Longitude
- Human variables
 - Total Phosphorus
 - Large Wood Volume
 - House Density
 - Total Nitrogen
 - Chloride
 - Watershed Total Nitrogen Yield
 - Etc

Work on answering remaining questions in progress

- **Q4:** How does SAM results compare to other monitoring programs in Puget Sound?
- **Q5:** What parameters would be carried forward for trend assessment of SAM stream monitoring in the future, and at what timing and frequency?

SAM Puget Lowlands Streams Status & Trends

Current Schedule

- Draft report in progress
- Complete draft report for review by August 2017
- Final report completed by December 2017
