

An aerial photograph showing a town and surrounding areas completely inundated with floodwater. In the foreground, a multi-lane highway runs diagonally, with some vehicles visible. The town below is densely packed with houses and commercial buildings, all surrounded by water. The sky is overcast and grey.

HOW HAS THE CHEHALIS BASIN FLOODING IMPACTED **YOU?**

Share your experiences—take our survey

Together, we can find solutions that reduce the impacts of flooding while protecting the things we value most about the Chehalis Basin.

The Local Actions Non-Dam Alternatives (LAND) is a collaborative effort to identify and evaluate potential options to the proposed flood retention dam on the upper Chehalis River that can reduce flood damage while maintaining the region's cultural, ecological and economic integrity.

Chehalis Basin community members met in May 2022 to establish shared values that can serve as a foundation for LAND as we explore possible alternatives. These values will be shaped and refined through public feedback.
